Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

US-09-991-181-27/c
; Sequence 27, Application US/09991181
; Patent No. 6913919
; GENERAL INFORMATION:
; APPLICANT: Ashkenazi,Avi J.
; APPLICANT: Baker,Kevin P.
; APPLICANT: Botstein,David
; APPLICANT: Desnoyers,Luc
; APPLICANT: Eaton,Dan L.
; APPLICANT: Ferrara,Napoleone
; APPLICANT: Fong,Sherman
; APPLICANT: Gerber,Hanspeter
; APPLICANT: Gerritsen,Mary E.
; APPLICANT: Goddard,Audrey
; APPLICANT: Godowski,Paul J.
; APPLICANT: Grimaldi,J.Christopher
; APPLICANT: Gurney,Austin L.
; APPLICANT: Kljavin,Ivar J.
; APPLICANT: Napier,Mary A.
; APPLICANT: Pan,James
; APPLICANT: Paoni,Nicholas F.
; APPLICANT: Roy, Margaret Ann
; APPLICANT: Stewart, Timothy A.
; APPLICANT: Tumas, Daniel
; APPLICANT: Watanabe, Colin K.
; APPLICANT: Williams, P. Mickey
; APPLICANT: Wood, William I.
; APPLICANT: Zhang, Zemin
; TITLE OF INVENTION: Secreted and Transmembrane Polypeptides and Nucleic
; TITLE OF INVENTION: Acids Encoding the Same
; FILE REFERENCE: P2730P1C53
; CURRENT APPLICATION NUMBER: US/09/991,181
; CURRENT FILING DATE: 2001-11-16
; PRIOR APPLICATION NUMBER: 60/049787

PT   Novel isolated polynucleotide encoding a polypeptide comprising a portion
PT   of colon tumor protein, useful for detection, diagnosis and therapy of
PT   human colon cancer.
XX
PS   Claim 1; Page 182; 220pp; English.
XX
CC   The invention relates to an isolated polynucleotide (I) encoding a
CC   polypeptide (II) comprising at least a portion of a colon tumour protein.
CC   (I), (II) and antibody (III) to (II) are useful for determining the
CC   presence of a cancer in a patient. (I), (II) or antigen presenting cells
CC   expressing (I) is useful for stimulating and/or expanding T cells
CC   specific for a tumour protein, by contacting T cells with (I), (II) or
CC   antigen-presenting cells that express (I), under conditions and for a
CC   time sufficient to permit the stimulation and/or expansion of T cells.
CC   (I), (II), or antigen presenting cells that express (II) are useful for
CC   treating colon cancer in a patient by incubating CD4+ and/or CD8+ T cells
CC   isolated from a patient with (I), (II) or antigen presenting cells that
CC   express (II), such that T cells proliferate, and administering to the
CC   patient an effective amount of the proliferated T cells, thus inhibiting
CC   the development of a cancer in the patient. (I) or (II) is useful in
CC   vaccines and pharmaceutical compositions for prevention and treatment of
CC   colon malignancies and for the diagnosis and monitoring of such cancers.
CC   (I), (II) or (III) is useful for detection, diagnosis and/or therapy of
CC   human colon cancer. (I) is useful as a probe or primer for nucleic acid
CC   hybridisation, and in the design and preparation of ribozyme molecules
CC   for inhibiting expression of (II) in tumour cells. ABK27564-ABK27807
CC   represent novel human colon cancer coding sequences and primers of the
CC   invention

PT   New isolated polynucleotide and pancreatic tumor polypeptides, useful for
PT   diagnosing, preventing and/or treating cancer, particularly pancreatic
PT   cancer.
XX
PS   Claim 1; SEQ ID NO 1367; 300pp + Sequence Listing; English.
XX
CC   The invention relates to an isolated polynucleotide (I) comprising: (a)
CC   any of a group of over 4000 nucleotide sequences (ABV94628-ABV99145); (b)
CC   complements of (a); (c) sequences consisting of at least 20 contiguous
CC   residues of (a); (d) sequences that hybridize to (a), under moderately
CC   stringent conditions; (e) sequences having at least 75% or 90% identity
CC   to (a); or (f) degenerate variants of (a). Polypeptides (ABP68596-
CC   ABP68637) encoded by (I) and oligonucleotide can be used to detect cancer
CC   in a patient and compositions comprising polypeptides, polynucleotides,
CC   antibodies, fusion proteins, T cell populations and antigen presenting
CC   cells expressing the polypeptide are useful in treating pancreatic cancer
CC   and stimulating an immune response. The polynucleotides can be used as
CC   probes or primers for nucleic acid hybridisation, in the design and
CC   preparation of ribozyme molecules for inhibiting expression of the tumour
CC   polypeptides and proteins in the tumour cells, in vaccines and for gene
CC   therapy. Note: The sequence data for this patent did not form part of the
CC   printed specification, but was obtained in electronic format directly
CC   from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   Novel isolated colon tumor polynucleotide differentially expressed in
PT   colon tumor or colon metastatic tumor and polypeptides encoded by them,
PT   useful for inhibiting development of cancer in patient.
XX
PS   Claim 1; SEQ ID NO 50; 105pp; English.
XX
CC   ABL36412 to ABL38645 represent human colon tumour antigen cDNA clones (I)
CC   which were isolated from human colon tumour and colon metastatic tumour
CC   cDNA libraries. (I) have cytostatic activity and can be used in vaccine
CC   production. (I) can be used for stimulating and/or expanding T cells
CC   specific for a tumour protein on contact with the T cells. They are also
CC   useful for inhibiting the development of cancer in a patient. (I) can be
CC   used as probes or primers for nucleic acid hybridisation, for preparing
CC   mutant species primers, or primers for use in genetic constructions. (I)
CC   can be used in the diagnosis of a colon tumour

PT   New isolated nucleic acids and polypeptides capable of eliciting a
PT   humoral and/or cellular immune response, useful for diagnosing,
PT   preventing or treating cancer, particularly colon cancer.
XX
PS   Claim 1; SEQ ID NO 1363; 87pp; English.
XX
CC   The invention relates to polynucleotide and polypeptide sequences
CC   associated with cancer, particularly colon cancer. Also disclosed are (i)
CC   an expression vector comprising the polynucleotide, (ii) a host cell
CC   transformed or transfected with the expression vector, (iii) an isolated
CC   antibody, or its antigen-binding fragment, which specifically binds to
CC   the polypeptide, (iv) a method of detecting or determining the presence
CC   of cancer in a patient, (v) a fusion protein comprising at least one of
CC   the polypeptides, (vi) an oligonucleotide that hybridises to the
CC   polynucleotide sequence under highly stringent conditions, and (vii) a
CC   method of stimulating and/or expanding T cells specific for a tumour
CC   protein. The polypeptide specifically comprises the amino acid sequence
CC   of C634S, C635S, C637S, C640S, C636S or one of the potential open reading
CC   frames (ORFs) of C636S. These polypeptides are encoded by the
CC   polynucleotide sequences, where both are capable of eliciting a humoral
CC   and/or cellular immune response. The polynucleotides, polypeptides, and
CC   antibodies are useful for diagnosing, preventing or treating cancer,
CC   particularly colon cancer. The polynucleotide and polypeptide sequences
CC   are also useful in DNA strand invasion, antisense inhibition, mutational
CC   analysis, nucleic acid purification, isolation of transcriptionally
CC   active genes, blocking or transcription factor binding, genome cleavage
CC   or in situ hybridisation, and as enhancers of transcription or
CC   biomarkers. This sequence represents a human colon cancer associated
CC   cDNA. Note: The sequence data for this patent was obtained in electronic
CC   format directly from the USPTO web site at seqdata.uspto.gov

PT Human genome-derived single exon nucleic acid probes useful for analyzing
PT gene expression in human cervical epithelial cells.
XX
PS Claim 25; SEQ ID NO 5244; 487pp; English.
XX
CC The present invention relates to human single exon nucleic acid probes
CC (SENP). The present sequence is one such probe. The SENPs are derived
CC from human HeLa cells. The SENPs can be used to produce a single exon
CC microarray, which can be used for measuring human gene expression in a
CC sample derived from human cervical epithelial cells. By measuring gene
CC expression, the probes are therefore useful in grading and/or staging of
CC diseases of the cervix, notably cervical cancer. Note: The sequence data
CC for this patent did not form part of the printed specification, but was
CC obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

PT   New isolated prostate-derived nucleic acids - used to develop products
PT   which may have cytokine, immune regulatory, haematopoiesis regulating,
PT   anti-inflammatory or tumour inhibition activity.
XX
PS   Claim 1; Page 298; 675pp; English.
XX
CC   AAX40438 to AAX40715 represent 5' expressed sequence tags (ESTs) for
CC   human secreted proteins expressed in prostate, and encode the proteins
CC   given in AAY11716 to AAY11993 respectively. The proteins given represent
CC   the signal peptide and an N-terminal fragment of a secreted protein. The
CC   nucleic acid sequences can be used for producing secreted human gene
CC   products. They can also be used to develop products for diagnosis and
CC   therapy. The proteins obtained may have cytokine activity, cell
CC   proliferation and differentiation activity, haematopoiesis regulating
CC   activity, tissue growth regulating activity, reproductive hormone
CC   regulating activity, chemotactic/chemokinetic activity, haemostatic and
CC   thrombolytic activity, receptor/ligand activity, anti-inflammatory
CC   activity, tumour inhibition activity or other activities. The products
CC   can be used in forensic, gene therapy and chromosome mapping procedures.
CC   The sequences can also be used for obtaining corresponding promoter
CC   sequences. The nucleic acids encoding the signal peptides can be used for
CC   directing extracellular secretion of a polypeptide or the insertion of a
CC   polypeptide into a membrane, or importing a polypeptide into a cell

PS   Claim 1; SEQ ID NO 983; 87pp; English.
XX
CC   The invention relates to polynucleotide and polypeptide sequences
CC   associated with cancer, particularly colon cancer. Also disclosed are (i)
CC   an expression vector comprising the polynucleotide, (ii) a host cell
CC   transformed or transfected with the expression vector, (iii) an isolated
CC   antibody, or its antigen-binding fragment, which specifically binds to
CC   the polypeptide, (iv) a method of detecting or determining the presence
CC   of cancer in a patient, (v) a fusion protein comprising at least one of
CC   the polypeptides, (vi) an oligonucleotide that hybridises to the
CC   polynucleotide sequence under highly stringent conditions, and (vii) a
CC   method of stimulating and/or expanding T cells specific for a tumour
CC   protein. The polypeptide specifically comprises the amino acid sequence
CC   of C634S, C635S, C637S, C640S, C636S or one of the potential open reading
CC   frames (ORFs) of C636S. These polypeptides are encoded by the
CC   polynucleotide sequences, where both are capable of eliciting a humoral
CC   and/or cellular immune response. The polynucleotides, polypeptides, and
CC   antibodies are useful for diagnosing, preventing or treating cancer,
CC   particularly colon cancer. The polynucleotide and polypeptide sequences
CC   are also useful in DNA strand invasion, antisense inhibition, mutational
CC   analysis, nucleic acid purification, isolation of transcriptionally
CC   active genes, blocking or transcription factor binding, genome cleavage
CC   or in situ hybridisation, and as enhancers of transcription or
CC   biomarkers. This sequence represents a human colon cancer associated
CC   cDNA. Note: The sequence data for this patent was obtained in electronic
CC   format directly from the USPTO web site at seqdata.uspto.gov

CC   the polypeptides, (vi) an oligonucleotide that hybridises to the
CC   polynucleotide sequence under highly stringent conditions, and (vii) a
CC   method of stimulating and/or expanding T cells specific for a tumour
CC   protein. The polypeptide specifically comprises the amino acid sequence
CC   of C634S, C635S, C637S, C640S, C636S or one of the potential open reading
CC   frames (ORFs) of C636S. These polypeptides are encoded by the
CC   polynucleotide sequences, where both are capable of eliciting a humoral
CC   and/or cellular immune response. The polynucleotides, polypeptides, and
CC   antibodies are useful for diagnosing, preventing or treating cancer,
CC   particularly colon cancer. The polynucleotide and polypeptide sequences
CC   are also useful in DNA strand invasion, antisense inhibition, mutational
CC   analysis, nucleic acid purification, isolation of transcriptionally
CC   active genes, blocking or transcription factor binding, genome cleavage
CC   or in situ hybridisation, and as enhancers of transcription or
CC   biomarkers. This sequence represents a human colon cancer associated
CC   cDNA. Note: The sequence data for this patent was obtained in electronic
CC   format directly from the USPTO web site at seqdata.uspto.gov

PT   Human genome-derived single exon nucleic acid probes useful for analyzing
PT   gene expression in human cervical epithelial cells.
XX
PS   Claim 25; SEQ ID NO 14417; 487pp; English.
XX
CC   The present invention relates to human single exon nucleic acid probes
CC   (SENP). The present sequence is one such probe. The SENPs are derived
CC   from human HeLa cells. The SENPs can be used to produce a single exon
CC   microarray, which can be used for measuring human gene expression in a
CC   sample derived from human cervical epithelial cells. By measuring gene
CC   expression, the probes are therefore useful in grading and/or staging of
CC   diseases of the cervix, notably cervical cancer. Note: The sequence data
CC   for this patent did not form part of the printed specification, but was
CC   obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT Primer sets for synthesizing polynucleotides, particularly the 5602 full-
PT length cDNAs defined in the specification, and for the detection and/or
PT diagnosis of the abnormality of the proteins encoded by the full-length
PT cDNAs.
XX
PS Claim 1; SEQ ID NO 4908; 2537pp + Sequence Listing; English.
XX
CC The present invention describes primer sets for synthesising 5602 full-
CC length cDNAs defined in the specification. Where a primer set comprises:
CC (a) an oligo-dT primer and an oligonucleotide complementary to the
CC complementary strand of a polynucleotide which comprises one of the 5602
CC nucleotide sequences defined in the specification, where the
CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC of an oligonucleotide comprising a sequence complementary to the
CC complementary strand of a polynucleotide which comprises a 5'-end
CC sequence and an oligonucleotide comprising a sequence complementary to a
CC polynucleotide which comprises a 3'-end sequence, where the
CC oligonucleotide comprises at least 15 nucleotides and the combination of
CC the 5'-end sequence/3'-end sequence is selected from those defined in the
CC specification. The primer sets can be used in antisense therapy and in
CC gene therapy. The primers are useful for synthesising polynucleotides,
CC particularly full-length cDNAs. The primers are also useful for the
CC detection and/or diagnosis of the abnormality of the proteins encoded by
CC the full-length cDNAs. The primers allow obtaining of the full-length
CC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and
CC AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893
CC represent human amino acid sequences; and AAH13629 to AAH13632 represent
CC oligonucleotides, all of which are used in the exemplification of the
CC present invention

PT New breast tumor protein genes used, in vaccines for immunotherapy, or
PT for diagnosis of breast cancer.
XX
PS Claim 3; Page 60; 70pp; English.
XX
CC This sequence encodes a human breast tumour protein immunogenic fragment
CC of the invention. The polypeptides or nucleic acids encoding them are
CC useful in vaccines and pharmaceutical compositions for manufacture of
CC medicaments for inhibiting the development of breast cancer in a patient.
CC They can also be used to treat breast cancer. Antibodies against these
CC polypeptides can be used to detect and monitor progression of breast
CC cancer in patients. Primers and probes derived from the polynucleotides
CC encoding the breast proteins are useful for detection of breast cancer.
CC Peripheral blood cells from a patient incubated in the presence of at
CC least one polypeptide, such that T cells proliferate, are useful in
CC manufacture of a medicament for treating breast cancer in a patient.
CC Antigen presenting cells incubated in the presence of at least one
CC polypeptide are also useful for treating breast cancer

PT   Polynucleotides encoding breast tumor polypeptides, useful for treating
PT   breast cancer or stimulating an immune response.
XX
PS   Claim 1; Page 131; 150pp; English.
XX
CC   The invention relates to polynucleotides encoding breast tumour
CC   polypeptides. The sequences are useful for treating cancer, preferably
CC   breast cancer, in a patient or for stimulating an immune response. The
CC   polynucleotides and polypeptides are also useful in the diagnosis and
CC   monitoring of breast cancer. A method for detecting the presence of a
CC   cancer in a patient, comprises obtaining a biological sample from the
CC   patient, contacting the biological sample with a binding agent that binds
CC   to a breast tumour polypeptide, detecting in the sample an amount of
CC   polypeptide that binds to the binding agent, and comparing the amount of
CC   polypeptide to a predetermined cut-off value, therefore determining the
CC   presence of a cancer in the patient. Sequences ABK28920-ABK29025
CC   represent cDNA clones encoding human breast tumour polypeptides of the
CC   invention

PT New isolated polynucleotide and encoded polypeptides, useful in
PT diagnostics, forensics, gene mapping, identification of mutations
PT responsible for genetic disorders or other traits and to assess
PT biodiversity.
XX
PS Claim 1; SEQ ID NO 22058; 103pp; English.
XX
CC The invention relates to isolated polynucleotide (I) and polypeptide (II)
CC sequences. (I) is useful as hybridisation probes, polymerase chain
CC reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
CC and in recombinant production of (II). The polynucleotides are also used
CC in diagnostics as expressed sequence tags for identifying expressed
CC genes. (I) is useful in gene therapy techniques to restore normal
CC activity of (II) or to treat disease states involving (II). (II) is
CC useful for generating antibodies against it, detecting or quantitating a
CC polypeptide in tissue, as molecular weight markers and as a food
CC supplement. (II) and its binding partners are useful in medical imaging
CC of sites expressing (II). (I) and (II) are useful for treating disorders
CC involving aberrant protein expression or biological activity. The
CC polypeptide and polynucleotide sequences have applications in
CC diagnostics, forensics, gene mapping, identification of mutations
CC responsible for genetic disorders or other traits to assess biodiversity
CC and to produce other types of data and products dependent on DNA and
CC amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic
CC coding sequences of the invention. Note: The sequence data for this
CC patent did not appear in the printed specification, but was obtained in
CC electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

PT Colon cancer associated gene sequences, referred to as colon cancer
PT antigens, useful for the treatment, prevention, and diagnosis of colon
PT disorders such as colon cancer.
XX
PS Claim 1; Page 597; 2104pp; English.
XX
CC AAC97991 to AAC98763 encode the human colon cancer associated proteins,
CC called human colon cancer antigens, given in AAB53234 to AAB54006. The
CC human colon cancer antigens can have cytostatic, cardioactive, muscular;
CC neuroprotective, immunomodulatory, gynaecological, gastrointestinal,
CC vulnerary, nephrotropic, antiinfective and antibacterial activities, and
CC can be used in gene therapy. The colon cancer antigen polynucleotides,
CC proteins and antibodies to the proteins are useful for the prevention,
CC treatment and diagnosis of colon disorders, such as colon cancer. The
CC polynucleotides may be used in diagnostics and research, such as for
CC chromosome identification, and as hybridisation probes. The proteins may
CC also be used to prevent diseases such as neural disorders, immune system
CC disorders, muscular disorders, reproductive disorders, gastrointestinal
CC disorders, wounds, renal disorders, infectious diseases, and
CC cardiovascular disorders. AAC98764 to AAC98772 and AAB54007 represent
CC sequences used in the exemplification of the present invention

PT Novel proteins used to treat inflammatory diseases, NF-kappaB related
PT diseases and for improvement of anti-tumor treatments.
XX
PS Claim 9; Page 37-39; 48pp; English.
XX
CC This sequence represents the gene encoding human CD40 receptor associated
CC protein (CRAP). CRAP is a functional protein capable of interacting with
CC the cytoplasmic domain of CD40 and/or other receptors of the tumour
CC necrosis factor (TNF) receptor superfamily such as CD30 and TNF receptor
CC I, where the protein has no homology to TNF receptor associated factor
CC (TRAF)-proteins. The CD40 binding proteins can be used as modulators of
CC the CD40 signalling pathway, especially to diagnose and treat TRAF-
CC related, CD40-related, NF-kappaB related and/or Jun (kinase)-related
CC diseases, and for the improvement of anti-tumour diseases. Diseases which
CC may be treated include atherosclerosis, arthritis, multiple sclerosis,
CC systemic lupus erythematosus, graft rejection, graft versus host disease,
CC allergy, and autoimmune disease. The proteins can be used to sensitize
CC tumour cells to anti-tumour treatments and to screen for compounds which
CC interfere with the interaction of the proteins with other protein
CC components of the TRAF, CD40 or NF-kappaB related pathway

XX
CC This invention relates to novel human genes and gene product which are
CC implicated in certain disease states. Compounds which modulate the
CC proteins of the invention may have cytostatic, antiinflammatory,
CC ophthalmological, antiarteriosclerotic or vulnerary activities. The
CC sequences of the invention may be useful for gene therapy. The invention
CC may be useful for diagnosing or treating a hypoxia-regulated condition,
CC such as tumourigenesis, angiogenesis, apoptosis, inflammation,
CC erythropoiesis, or the biological response to hypoxia conditions
CC including processes such as glycolysis, gluconeogenesis, glucose
CC transportation, catecholamine synthesis, iron transport or nitric oxide
CC synthesis. The disease includes cancer, ischaemic conditions, reperfusion
CC injury, retinopathy, neonatal stress, pre-eclampsia, atherosclerosis,
CC inflammatory conditions or wound healing. The present sequence is that of
CC a disease related protein encoding DNA sequence of the invention.

PT New PRO polypeptides and polynucleotides, useful for treating e.g.
PT erythematosus, rheumatoid arthritis, diabetes mellitus, immune-mediated
PT renal disease, or demyelinating diseases of the central or peripheral
PT nervous system.
XX
PS Claim 1; SEQ ID NO 475; 2940pp; English.
XX
CC The invention relates to a novel isolated nucleic acid and the PRO
CC polypeptide encoded by it. A protein of the invention has
CC antiinflammatory, antiarthritic, antirheumatic, immunosuppressive,
CC osteopathic, antidiabetic, dermatological, antipsoriatic, antiallergic,
CC antiasthmatic, hepatotropic, and respiratory activity. A polynucleotide
CC of the invention may have a use in gene therapy. The PRO polypeptide, its
CC agonist, antagonist, or antibody that specifically binds to the
CC polypeptide is useful for treating an immune related disorder such as
CC systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis,
CC juvenile chronic arthritis, a spondyloarthropathy, systemic sclerosis, an
CC idiopathic inflammatory myopathy, Sjogren's syndrome, systemic
CC vasculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune
CC thrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal
CC disease, a demyelinating disease of the central or peripheral nervous
CC system, idiopathic demyelinating polyneuropathy, Guillain-Barre syndrome,
CC a chronic inflammatory demyelinating polyneuropathy, a hepatobiliary
CC disease, infectious or autoimmune chronic active hepatitis, primary
CC biliary cirrhosis, granulomatous hepatitis, sclerosing cholangitis,
CC inflammatory bowel disease, gluten-sensitive enteropathy, Whipple's
CC disease, an autoimmune or immune-mediated skin disease, a bullous skin
CC disease, erythema multiforme, contact dermatitis, psoriasis, an allergic
CC disease, asthma, allergic rhinitis, atopic dermatitis, food
CC hypersensitivity, urticaria, an immunologic disease of the lung,
CC eosinophilic pneumonia, idiopathic pulmonary fibrosis, hypersensitivity
CC pneumonitis, a transplantation associated disease, graft rejection or
CC graft-versus-host disease. The present sequence encodes a PRO protein of
CC the invention.

PT   Biomarkers useful for predicting or determining the response of a mammal
PT   to a cancer treatment comprising administration of a modulator of cyclin-
PT   dependent kinase activity.
XX
PS   Claim 5; SEQ ID NO 921; 141pp; English.
XX
CC   This invention describes a novel method of predicting or determining
CC   whether a mammal will respond or is responding to an anti-cancer agent
CC   that modulates cyclin-dependent kinase (cdk) activity. The method
CC   comprises measuring the level of one or more biomarkers selected from
CC   2774 biomarkers given in the specification (nucleotide sequence SEQ ID
CC   NO:1246 (Genbank EST W28729) is especially preferred). The method of the
CC   invention is utilized in a kit for determining or predicting whether
CC   patient would be susceptible or resistant to treatment by an agent
CC   modulating cdk activity. The invention also describes a method for
CC   utilizing individualized genetic profiles for treating diseases and
CC   disorders based on patient's response and molecular level, specialized
CC   microarrays comprising the biomarkers described, antibodies directed
CC   against the biomarkers and a cell culture model to identify biomarkers.
CC   The cdk modulator is preferably N-5-[[5-(1,1-Dimethylethyl)-2-
CC   oxazolyl]methyl]thio]-2-thiazolyl-4-piperidine carboxamide, 0.5-L-
CC   tartaric acid salt. Note: The sequence data for this patent did not form
CC   part of the printed specification, but was obtained in electronic format
CC   directly from WIPO at ftp.wipo.int/pub/published_pct_sequences. This
CC   sequence encodes a biomarker used in the method of the invention.

PT   Novel nucleic acids and polypeptides, useful for treating disorders such
PT   as central nervous system injuries.
XX
PS   Claim 1; SEQ ID NO 4772; 10078pp; English.
XX
CC   The invention relates to human nucleic acids (AAI57798-AAI61369) and the
CC   encoded polypeptides (AAM38642-AAM42213) with nootropic,
CC   immunosuppressant and cytostatic activity. The polynucleotides are useful
CC   in gene therapy. A composition containing a polypeptide or polynucleotide
CC   of the invention may be used to treat diseases of the peripheral nervous
CC   system, such as peripheral nervous injuries, peripheral neuropathy and
CC   localised neuropathies and central nervous system diseases, such as
CC   Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic
CC   lateral sclerosis, and Shy-Drager Syndrome. Other uses include the
CC   utilisation of the activities such as: Immune system suppression,
CC   Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic
CC   and thrombolytic activity, cancer diagnosis and therapy, drug screening,
CC   assays for receptor activity, arthritis and inflammation, leukaemias and
CC   C.N.S disorders. Note: The sequence data for this patent did not form
CC   part of the printed specification

PT New combination comprising cDNAs that are differentially expressed in
PT colon disorder, useful for diagnosing, treating, staging or monitoring
PT treatment for colon cancers.
XX
PS Claim 1; SEQ ID NO 88; 231pp; English.
XX
CC The invention relates to a combination comprising cDNAs that are
CC differentially expressed in colon disorder. The methods and compositions
CC of the present invention are useful for diagnosing, treating, staging or
CC monitoring treatment for colon cancer. They are also useful in high
CC throughput methods for using cDNAs to detect differential expression of
CC nucleic acids in a sample, screening molecules or compounds to identify a
CC ligand which specifically binds a cDNA and using a protein to screen
CC molecules or compounds to identify at least one ligand which specifically
CC binds the protein. The present sequence represents a human cDNA
CC differentially expressed in colon cancer.

PT Array containing probes for genes involved in mitochondrial biology,
PT useful for determining mitochondrial biology gene expression profiles for
PT use in diagnosing pathologies and identifying biochemical pathways.
XX
PS Claim 2; SEQ ID NO 2154; 201pp; English.
XX
CC The invention relates to a novel array comprising at least two isolated
CC nucleotide molecules, each molecule having a sequence capable of uniquely
CC hybridising to a nucleic acid molecule which is an expression product of
CC a gene involved in mitochondrial biology. The array comprises two or more
CC isolated nucleic acid molecules or spots, each molecule having a sequence
CC chosen from sequence of 994 human probes and 2046 mouse probes. An array
CC of the invention is useful for determining an expression profile of a
CC mouse or human sample containing nucleic acid, by contacting the array
CC with the sample under conditions allowing selective hybridisation, and
CC measuring hybridisation of nucleic acid in the sample to the array to
CC produce an expression profile. The array is also useful for determining
CC an expression profile of a first labelled sample containing nucleic acid
CC relative to a second, differently labelled sample containing nucleic
CC acid. The second sample is a reference or a standard. An array is useful
CC for determining an expression profile diagnostic of an energy-metabolism-
CC related physiological condition. An array of the invention is useful for
CC determining mitochondrial biology gene expression profiles of organisms,
CC such as human, mice and closely related species, tissue and organs of
CC such organisms, which are useful for determining expression profiles
CC diagnostic of energy metabolism-related physiological conditions,
CC diagnosing such physiological conditions, identifying biochemical
CC pathways, genes, and mutations involved in such physiological conditions,
CC identifying therapeutic agents useful for preventing and/or treating such
CC physiological conditions, evaluating and/or monitoring the efficacy of
CC such therapies, and creating and identifying animal models of human
CC energy metabolism-related physiological conditions. An array is also
CC useful for defining expression signatures or profiles for mitochondrial
CC diseases, as well as distinguishing clinical disorders that result from
CC oxidative phosphorylation (OXPHOS) dysfunction, oxidative stress,
CC apoptosis and aging. An array of the invention contains probes of genes
CC not previously recognised to participate in mitochondrial biology. The
CC sequences shown in ADD33224-ADD35260 represent murine mitochondrial DNA
CC clones used to make the probes of the invention. Some sequences are not
CC present, these are SEQ ID NO's 295, 1174, 1213, 1700, 1728, 1730, 1905,
CC 1906, 2408 and 2643.

PT   Novel proteins used to treat inflammatory diseases, NF-kappaB related
PT   diseases and for improvement of anti-tumor treatments.
XX
PS   Claim 10; Page 41-43; 48pp; English.
XX
CC   This sequence represents the gene encoding mouse CD40 receptor associated
CC   protein (CRAP). CRAP is a functional protein capable of interacting with
CC   the cytoplasmic domain of CD40 and/or other receptors of the tumour
CC   necrosis factor (TNF) receptor superfamily such as CD30 and TNF receptor
CC   I, where the protein has no homology to TNF receptor associated factor
CC   (TRAF)-proteins. The CD40 binding proteins can be used as modulators of
CC   the CD40 signalling pathway, especially to diagnose and treat TRAF-
CC   related, CD40-related, NF-kappaB related and/or Jun (kinase)-related
CC   diseases, and for the improvement of anti-tumour diseases. Diseases which
CC   may be treated include atherosclerosis, arthritis, multiple sclerosis,
CC   systemic lupus erythematosus, graft rejection, graft versus host disease,
CC   allergy, and autoimmune disease. The proteins can be used to sensitize
CC   tumour cells to anti-tumour treatments and to screen for compounds which
CC   interfere with the interaction of the proteins with other protein
CC   components of the TRAF, CD40 or NF-kappaB related pathway

PT   New isolated nucleic acids and polypeptides capable of eliciting a
PT   humoral and/or cellular immune response, useful for diagnosing,
PT   preventing or treating cancer, particularly colon cancer.
XX
PS   Claim 1; SEQ ID NO 548; 87pp; English.
XX
CC   The invention relates to polynucleotide and polypeptide sequences
CC   associated with cancer, particularly colon cancer. Also disclosed are (i)
CC   an expression vector comprising the polynucleotide, (ii) a host cell
CC   transformed or transfected with the expression vector, (iii) an isolated
CC   antibody, or its antigen-binding fragment, which specifically binds to
CC   the polypeptide, (iv) a method of detecting or determining the presence
CC   of cancer in a patient, (v) a fusion protein comprising at least one of
CC   the polypeptides, (vi) an oligonucleotide that hybridises to the
CC   polynucleotide sequence under highly stringent conditions, and (vii) a
CC   method of stimulating and/or expanding T cells specific for a tumour
CC   protein. The polypeptide specifically comprises the amino acid sequence
CC   of C634S, C635S, C637S, C640S, C636S or one of the potential open reading
CC   frames (ORFs) of C636S. These polypeptides are encoded by the
CC   polynucleotide sequences, where both are capable of eliciting a humoral
CC   and/or cellular immune response. The polynucleotides, polypeptides, and
CC   antibodies are useful for diagnosing, preventing or treating cancer,
CC   particularly colon cancer. The polynucleotide and polypeptide sequences
CC   are also useful in DNA strand invasion, antisense inhibition, mutational
CC   analysis, nucleic acid purification, isolation of transcriptionally
CC   active genes, blocking or transcription factor binding, genome cleavage
CC   or in situ hybridisation, and as enhancers of transcription or
CC   biomarkers. This sequence represents a human colon cancer associated
CC   cDNA. Note: The sequence data for this patent was obtained in electronic
CC   format directly from the USPTO web site at seqdata.uspto.gov

PT Novel human polypeptides and polynucleotides useful for diagnosing,
PT preventing and treating cardiovascular disease, neurodegenerative,
PT hyperproliferative disorders and autoimmune disorders.
XX
PS Disclosure; SEQ ID NO 1851; 1037pp; English.
XX
CC The present invention describes substantially purified human proteins
CC (referred to as open reading frame, ORFX, where X is 1-11491 (see Table 1
CC in the specification). ABN15762 to ABN27252 encode the human ORFX
CC proteins given in ABP00010 to ABP11500. ORFX proteins are useful for
CC treating or preventing a pathology associated with an ORFX-associated
CC disorder in humans, and in the manufacture of a medicament for treating a
CC syndrome associated with ORFX-associated disorder. ORFX polynucleotide
CC sequences can be used in gene therapy. ORFX sequences can be used in the
CC treatment of cancer, hyperproliferative disorders, cirrhosis of liver,
CC psoriasis, benign tumours, keloid, degenerative disorders, haemorrhage,
CC osteoarthritis, neurodegenerative disorders, disorders related to organ
CC transplantation, cardiovascular diseases, diabetes mellitus, systemic
CC lupus erythematosus, hypertension, hypothyroidism, cholesterol ester

```
CC   storage disease, various immune deficiencies and disorders, infectious
CC   diseases, autoimmune disorders such as multiple sclerosis, rheumatoid
CC   arthritis, autoimmune thyroiditis, myasthenia gravis, graft-versus-host
CC   disease and autoimmune inflammatory eye disease. ORFX proteins are also
CC   useful for treating burns, incisions, ulcers, for treating osteoporosis,
CC   bone degenerative disorders, or periodontal disease, and for gut
CC   protection or regeneration and treatment of lung or liver fibrosis,
CC   reperfusion injury in various tissues and conditions resulting from
CC   systemic cytokine damage. N.B. The sequence data for this patent did not
CC   form part of the printed specification, but was obtained in electronic
CC   format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   Novel polynucleotides derived from Coryneform bacteria, for identifying
PT   mutation point of a gene, measuring expression of a gene, analyzing
PT   expression profile or pattern of a gene and identifying homologous gene.
XX
PS   Claim 8; SEQ ID NO 746; 246pp + Sequence Listing; English.
XX
CC   The present invention provides a number of nucleotide and protein
CC   sequences from the Coryneform bacterium Corynebacterium glutamicum. These
CC   are useful for identifying the mutation point of a gene derived from a
CC   mutant of coryneform bacterium, measuring expression amount and analysing
CC   the expression profile or expression pattern of a gene derived from
CC   Coryneform bacterium, and identifying a homologue of a gene derived from
CC   coryneform bacterium. Coryneform bacteria are useful for producing amino
CC   acids, nucleic acids, vitamins, saccharides and organic acids,
CC   particularly L-lysine. The present sequence is a nucleic acid described
CC   in the exemplification of the invention. Note: The sequence data for this
CC   patent did not form part of the printed specification, but was obtained
CC   in electronic format directly from the European Patent Office

PT   New nucleic acid array useful for monitoring mRNA expression of
PT   Corynebacterium glutamicum during fermentation, comprising nucleic acid
PT   from Corynebacterium glutamicum.
XX
PS   Claim 1; Page 110; 709pp; German.
XX
CC   This invention describes a novel nucleic acid array involving
CC   Corynebacterium glutamicum polynucleotides. The arrays are used to
CC   analyse C. glutamicum, particularly for monitoring a fermentation process
CC   to determine expression levels of C. glutamicum cellular mRNA. Such
CC   monitoring particularly differentiates between expression levels of
CC   different strains of C. glutamicum and allows the adjustment of different
CC   culture and fermentation conditions. ACA00010-ACA02188 represent C.
CC   glutamicum derived polynucleotides described in the disclosure of the
CC   invention

PS   Claim 1; SEQ ID NO 25133; 15pp; English.
XX
CC   The invention describes a recombinant DNA construct comprising a
CC   polynucleotide consisting of a sequence encoding an amino acid sequence
CC   available in electronic form from the US patent office at
CC   ftp.seqdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide
CC   of the invention are also useful in physical arrays of molecules and as
CC   plant breeding markers. The recombinant DNA construct is useful for
CC   improving plant tolerance to cold, heat, drought, herbicides, extreme
CC   osmotic conditions, pathogens or pests, for manipulating growth rate in
CC   plant cells by modification of the cell cycle pathway, for conferring
CC   increased resistance to plant disease, for producing galactomannan,
CC   lignin or plant growth regulators, for increasing the rate of homologous
CC   recombination in plants, for improving yield by modification of
CC   photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake
CC   or by providing improved plant growth and development under at least one
CC   stress condition or for modifying seed oil or protein yield and/or
CC   content. This sequence represents a plant full length insert
CC   polynucleotide that can be used in the recombinant DNA construct of the
CC   invention.

PT   Novel Arabidopsis thaliana nucleic acids useful for generating
PT   genetically modified transgenic organisms, for screening biologically
PT   active agents such as fungicides, insecticides.
XX
PS   Claim 1; SEQ ID NO 110; 44pp; English.
XX
CC   The invention describes a nucleic acid (I) comprising a sequence capable
CC   of hybridising under stringent conditions to any one of 999 fully defined
CC   Arabidopsis thaliana sequences (1) as given in specification e.g., 360,
CC   1137, 455, 219, 472 nucleotides, etc, or its fragment. (I) is useful as a
CC   hybridisation probe to complementary molecules in a cDNA library. (I) is
CC   also useful for generating genetically modified and transgenic organisms,
CC   usually plant cells and plants. A proten encoded by (I) is useful in
CC   screening assays to determine the effect of candidate inhibitors,
CC   activators or modifiers of the gene product. The protein is also useful
CC   for screening biologically active agents e.g., fungicides and
CC   insecticides. A genetically modified cell, comprising an exogenous
CC   nucleic acid, where the nucleic acid comprises transcription regulatory
CC   sequences operably linked to a sequence capable of hybridising under
CC   stringent conditions to (1) is useful in the study of genetic function
CC   and regulation, for alteration of the cellular metabolism and for
CC   screening compounds that may affect the biological function of the gene
CC   or gene product. This sequence represents an Arabidopsis thaliana
CC   polynucleotide of the invention.

PT   Altering plant characteristics, useful for producing plants for enzyme or
PT   pharmaceutical production comprises modifying in a plant, expression of
PT   one or more nucleic acids and/or modifying level or activity of one or
PT   more proteins.
XX
PS   Claim 1; SEQ ID NO 569; 134pp; English.
XX
CC   This invention relates to a novel method for altering one or more plant
```

CC characteristics. Specifically, it refers to identifying genes that are up
CC - or down-regulated in transgenic plants overexpressing the heterodimeric
CC E2Fa/DPa transcription factor of Arabidopsis and using these sequences to
CC alter plant characteristics accordingly. The present invention describes
CC generating transgenic plants for the production of growth regulators,
CC enzymes, therapeutics, pharmaceuticals and animal feed products, where
CC the altered plant characteristics are selected from increased yield or
CC biomass, enhanced survival capacity, stress tolerance, plant architecture
CC or physiology, altered endoreduplication, biochemistry, signal
CC transduction, storage lipid mobilisation and/or altered photosynthesis,
CC each relative to the corresponding wild type plants. Accordingly, these
CC sequences can also be useful as positive or negative selectable markers
CC during transformation of cells or tissues. The identified genes play a
CC role in a variety of biological processes such as DNA replication, cell
CC wall biosynthesis, nitrogen and/ or carbon metabolism or they function as
CC transcription factors. This polynucleotide sequence is thale cress cDNA
CC upregulated 1.3 fold or more in plants overexpressing the E2Fa/DPa
CC transcription factor, given in an exemplification of the invention.

PT Isolation of polynucleic acids useful for producing transgenic plant by
PT isolating genes involved in tolerance to environmental stress.
XX
PS Claim 4; Page 133-134; 312pp; English.
XX
CC The invention relates to isolation of coding sequences and/or genes
CC involved in tolerance to environmental stress in plants. The sequences
CC (AAZ98305-Z98365) are useful for producing a transgenic plant having
CC enhanced tolerance or resistance to environmental stress conditions such
CC as anaerobic, flooding, cold, dehydration, drought, heat stress or

```
CC   salinity. This is useful for producing improved yield, growth,
CC   development and productivity under environmental stress conditions, and
CC   also provides growth of crops in areas where they cannot grow without the
CC   induced osmotolerance. Sequences AAZ98305-365 represent polynucleotide
CC   sequences from A. thaliana that are involved in environmental stress
CC   tolerance

PT   Obtaining polynucleic acids with coding sequences involved in
PT   environmental stress in plants, by introducing coding sequences of cDNA
PT   library from siliques in yeast cells, screening stress tolerance
PT   polynucleic acids in transformed cells.
XX
PS   Claim 4; SEQ ID NO 27; 313pp; English.
XX
CC   The invention relates to a novel method for obtaining polynucleic acids,
CC   comprising coding sequences and/or genes involved in environmental stress
CC   in plants. The method involves preparing a cDNA library comprising coding
CC   sequences from siliques, introducing the coding sequences in yeast cells
CC   in a functional format and screening for polynucleic acids leading to an
CC   enhanced tolerance or resistance to environmental stress conditions in
CC   the transformed yeast cells. The method is useful for obtaining
CC   polynucleic acids, comprising coding sequences and/or genes involved in
CC   environmental stress in plants. An isolated polynucleic acid encoding an
CC   HSP 17.6A protein, obtained using the novel method, is useful for the
CC   production of transgenic plants having an enhanced tolerance or
CC   resistance to environmental stress conditions. Isolated polynucleic acids
CC   encoding plant DBF2 kinase or c74 protein can also be used to produce
CC   transgenic plants having an enhanced tolerance or resistance to
CC   environmental stress conditions. Recombinant nucleic acids produced using
CC   the novel method are useful in producing transgenic plants. The method is
CC   useful in obtaining nucleic acids involved in environmental stress, such
CC   as water stress (flooding, drought, dehydration), anaerobic (low level of
CC   oxygen, carbon dioxide), aerobic stress, osmotic stress, salt stress
CC   (hot/heat, cold, freezing, frost) or nutrient/pollutant stress). This
CC   polynucleotide sequence represents the gene encoding an Arabidopsis
CC   thaliana (thale cress) environmental stress protein of the invention.

XX
CC The invention relates to a recombinant DNA construct comprising a
CC promoter functional in a plant cell, where the promoter is positioned to
CC provide for expression of a polynucleotide encoding a polypeptide from a
CC microbial source. The invention also relates to a transformed plant
CC comprising the recombinant DNA construct and a method of producing a
CC transformed plant having an improved property. The plant is a crop plant
CC such as maize or soybean. The method of producing a transformed plant
CC having an improved property comprises transforming a plant with the
CC recombinant DNA construct and growing the transformed plant, where the
CC polynucleotide or polypeptide is useful for improving plant properties.
CC The recombinant DNA construct is useful for producing plants with
CC improved plant properties, e.g. improved cold, heat or drought tolerance,
CC tolerance to herbicides, extreme osmotic conditions, pathogens or pests,
CC increased resistance to plant disease, better growth rate by modification
CC of the cell cycle pathway with plant growth regulators, increased rate of
CC homologous recombination, modified seed oil or protein yield and/or
CC content, improved yield by modification of carbohydrate, nitrogen or
CC phosphorus use and/or uptake, by modification of photosynthesis or by
CC providing improved plant growth and development under at least one stress
CC condition, improved lignin production or improved galactomannan
CC production. This sequence represents a bacterial polynucleotide used in
CC the scope of the invention. Note: The sequence data for this patent did
CC not form part of the printed specification but was obtained in electronic
CC format from USPTO at seqdata.uspto.gov/sequence.html.

PT New recombinant DNA construct comprising a promoter positioned to provide
PT for expression of a polynucleotide encoding a polypeptide from a
PT microbial source, useful for producing plants with improved properties.
XX
PS Claim 1; SEQ ID NO 31729; 122pp; English.
XX
CC The invention relates to a recombinant DNA construct comprising a
CC promoter functional in a plant cell, where the promoter is positioned to
CC provide for expression of a polynucleotide encoding a polypeptide from a
CC microbial source. The invention also relates to a transformed plant
CC comprising the recombinant DNA construct and a method of producing a
CC transformed plant having an improved property. The plant is a crop plant
CC such as maize or soybean. The method of producing a transformed plant
CC having an improved property comprises transforming a plant with the
CC recombinant DNA construct and growing the transformed plant, where the
CC polynucleotide or polypeptide is useful for improving plant properties.
CC The recombinant DNA construct is useful for producing plants with
CC improved plant properties, e.g. improved cold, heat or drought tolerance,
CC tolerance to herbicides, extreme osmotic conditions, pathogens or pests,
CC increased resistance to plant disease, better growth rate by modification
CC of the cell cycle pathway with plant growth regulators, increased rate of
CC homologous recombination, modified seed oil or protein yield and/or
CC content, improved yield by modification of carbohydrate, nitrogen or
CC phosphorus use and/or uptake, by modification of photosynthesis or by
CC providing improved plant growth and development under at least one stress
CC condition, improved lignin production or improved galactomannan
CC production. This sequence represents a bacterial polynucleotide used in
CC the scope of the invention. Note: The sequence data for this patent did
CC not form part of the printed specification but was obtained in electronic
CC format from USPTO at seqdata.uspto.gov/sequence.html.

PT   New recombinant DNA construct comprising a promoter positioned to provide
PT   for expression of a polynucleotide encoding a polypeptide from a
PT   microbial source, useful for producing plants with improved properties.
XX
PS   Claim 1; SEQ ID NO 47104; 122pp; English.
XX
CC   The invention relates to a recombinant DNA construct comprising a
CC   promoter functional in a plant cell, where the promoter is positioned to
CC   provide for expression of a polynucleotide encoding a polypeptide from a
CC   microbial source. The invention also relates to a transformed plant
CC   comprising the recombinant DNA construct and a method of producing a
CC   transformed plant having an improved property. The plant is a crop plant
CC   such as maize or soybean. The method of producing a transformed plant
CC   having an improved property comprises transforming a plant with the
CC   recombinant DNA construct and growing the transformed plant, where the
CC   polynucleotide or polypeptide is useful for improving plant properties.
CC   The recombinant DNA construct is useful for producing plants with
CC   improved plant properties, e.g. improved cold, heat or drought tolerance,
CC   tolerance to herbicides, extreme osmotic conditions, pathogens or pests,
CC   increased resistance to plant disease, better growth rate by modification
CC   of the cell cycle pathway with plant growth regulators, increased rate of
CC   homologous recombination, modified seed oil or protein yield and/or
CC   content, improved yield by modification of carbohydrate, nitrogen or
CC   phosphorus use and/or uptake, by modification of photosynthesis or by
CC   providing improved plant growth and development under at least one stress
CC   condition, improved lignin production or improved galactomannan
CC   production. This sequence represents a bacterial polynucleotide used in
CC   the scope of the invention. Note: The sequence data for this patent did
CC   not form part of the printed specification but was obtained in electronic
CC   format from USPTO at seqdata.uspto.gov/sequence.html.

PT interactions.
XX
PS Claim 1; SEQ ID NO 19427; 21pp + Sequence Listing; English.
XX
CC The invention relates to an isolated nucleic acid detection reagent
CC capable of detecting 1000 or more genes from Drosophila. The invention is
CC useful in developmental biology and in elucidating cell signalling and
CC cell-cell interactions in higher eukaryotes for the development of
CC insecticides, therapeutics and pharmaceutical drugs. The invention
CC discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA
CC sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-
CC ABB72072). The sequence data for this patent did not form part of the
CC printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT New isolated DNA sequences, useful for increasing secondary metabolite
PT production in transformed Streptomyces strains, e.g. antibiotics, or for
PT accelerating sporulation in Streptomyces strains.
XX
PS Claim 1; SEQ ID NO 1; 79pp; English.
XX
CC The present sequence is an isolated DNA sequence conferring early and
CC increased secondary metabolite production in a Streptomyces strain. The
CC DNA sequences and transformed Streptomyces strains are useful for
CC increasing (heterologous) secondary metabolite production in Streptomyces
CC strains, e.g. antibiotics, or for accelerating sporulation in
CC Streptomyces strains. The transformed Streptomyces strains may be used as
CC an expression vehicle to assay libraries of soil DNA samples for members
CC having the ability to confer the phenotype of antibiotic secondary
CC metabolite production. The present sequence represents full length cosmid
CC 2A7 encoding sequence.

PT New isolated DNA sequences, useful for increasing secondary metabolite
PT production in transformed Streptomyces strains, e.g. antibiotics, or for
PT accelerating sporulation in Streptomyces strains.
XX
PS Claim 2; SEQ ID NO 2; 79pp; English.
XX
CC The present sequence is an isolated DNA sequence conferring early and
CC increased secondary metabolite production in a Streptomyces strain. The
CC DNA sequences and transformed Streptomyces strains are useful for
CC increasing (heterologous) secondary metabolite production in Streptomyces
CC strains, e.g. antibiotics, or for accelerating sporulation in
CC Streptomyces strains. The transformed Streptomyces strains may be used as
CC an expression vehicle to assay libraries of soil DNA samples for members
CC having the ability to confer the phenotype of antibiotic secondary
CC metabolite production. The present sequence represents cosmid 2A7
CC encoding sequence.

PT   Identifying an individual who has an altered risk for developing
PT   myocardial infarction by detecting a single nucleotide polymorphism in
PT   the individual's nucleic acids.
XX
PS   Claim 7; SEQ ID NO 7341; 145pp; English.
XX
CC   The invention relates to a novel method for identifying an individual who
CC   has an altered risk for developing myocardial infarction. The method
CC   comprises detecting a single nucleotide polymorphism (SNP) in any one of
CC   the nucleotide sequences given in the specification in the individual's
CC   nucleic acids, where the presence of the SNP is correlated with an
CC   altered risk for myocardial infarction in the individual. The invention
CC   further comprises: an isolated nucleic acid molecule comprising at least
CC   8 contiguous nucleotides where one of the nucleotides is an SNP given in
CC   the specification or its complement and encoding any one of the amino
CC   acid sequences given in the specification; an isolated polypeptide
CC   comprising an amino acid sequence given in the specification; an antibody
CC   that specifically binds to the polypeptide or its antigen-binding
CC   fragment; an amplified polynucleotide containing an SNP given in the
CC   specification and which is between about 16 and 1000 nucleotides in
CC   length; a kit for detecting an SNP in a nucleic acid, comprising the
CC   polynucleotide, a buffer and an enzyme; a method of detecting an SNP in a
CC   nucleic acid molecule; a method of detecting a variant polypeptide; and a
CC   method for identifying an agent useful in treating or preventing
CC   myocardial infarction. The novel detection method has cardiant activity.
CC   The nucleic acids of the invention may be used in gene therapy. The
CC   method is useful in identifying an individual who has an increased or
CC   decreased risk for developing myocardial infarction and for preparing a
CC   composition for treating or preventing myocardial infarction. This
CC   polynucleotide sequence represents a transcript-based context sequence
CC   which flanks an SNP found in a human myocardial infarction-associated
CC   gene of the invention. Note: This sequence was not shown in the
CC   specification. The sequence has come from an electronic sequence listing
CC   downloaded from the WIPO website.

PT New substantially purified nucleic acid molecule that encodes a maize,
PT soybean or Arabidopsis thaliana transcription factor or its fragment,
PT useful for genome mapping, gene identification and analysis or plant
PT breeding.
XX
PS Claim 2; SEQ ID NO 3628; 140pp; English.
XX
CC The invention describes a substantially purified nucleic acid molecule
CC that encodes a maize, soybean or Arabidopsis thaliana transcription
CC factor or its fragment, where the maize or soybean transcription factor
CC is homeobox, HLH, leucine zipper, zinc finger, or other transcription
CC factor. Also described are: a substantially purified maize or soybean
CC transcription factor or its fragment defined above; a substantially
CC purified antibody or its fragment which is capable of specifically
CC binding to the transcription factor or its fragment above; a transformed
CC plant; a method for determining a level or pattern in a plant cell of a
CC transcription factor in a plant metabolic pathway; a method of
CC determining a mutation in a plant; a method of producing a plant
CC containing an overexpressed protein ore reduced levels of plant
CC transcription factor; a method of determining an association between a
CC polymorphism and a plant trait; and a method of isolating a nucleic acid
CC that encodes a plant transcription factor or its fragment. The nucleic
CC acid molecules, proteins and their fragments are useful for genome
CC mapping, gene identification and analysis, plant breeding, preparation of
CC constructs for use in plant gene expression and transgenic plants. The
CC nucleic acid molecules are useful as markers or probes. This sequence
CC represents a soybean transcription factor polynucleotide.

XX
PS Claim 14; SEQ ID NO 35952; 1766pp; English.
XX
CC The invention relates to an isolated nucleic acid comprising any one of
CC the 6213 antisense sequences given in the specification where expression
CC of the nucleic acid inhibits proliferation of a cell. Also included are:
CC (1) a vector comprising a promoter operably linked to the nucleic acid
CC encoding a polypeptide whose expression is inhibited by the antisense
CC nucleic acid; (2) a host cell containing the vector; (3) an isolated
CC polypeptide or its fragment whose expression is inhibited by the
CC antisense nucleic acid; (4) an antibody capable of specifically binding
CC the polypeptide;(5) producing the polypeptide; (6) inhibiting cellular
CC proliferation or the activity of a gene in an operon required for
CC proliferation; (7) identifying a compound that influences the activity of
CC the gene product or that has an activity against a biological pathway
CC required for proliferation, or that inhibits cellular proliferation; (8)
CC identifying a gene required for cellular proliferation or the biological
CC pathway in which a proliferation-required gene or its gene product lies
CC or a gene on which the test compound that inhibits proliferation of an
CC organism acts; (9) manufacturing an antibiotic; (10) profiling a
CC compound's activity; (11) a culture comprising strains in which the gene
CC product is overexpressed or underexpressed; (12) determining the extent
CC to which each of the strains is present in a culture or collection of
CC strains; or (13) identifying the target of a compound that inhibits the
CC proliferation of an organism. The antisense nucleic acids are useful for
CC identifying proteins or screening for homologous nucleic acids required
CC for cellular proliferation to isolate candidate molecules for rational
CC drug discovery programs, or for screening homologous nucleic acids
CC required for proliferation in cells other than S. aureus, S. typhimurium,
CC K. pneumoniae or P. aeruginosa. The present sequence is one of the target
CC prokaryotic essential genes. Note: The sequence data for this patent did
CC not form part of the printed specification, but was obtained in
CC electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

PT   New nucleic acid encoding a Klebsiella pneumoniae polypeptide, useful for
PT   preparing a vaccine composition against Klebsiella pneumoniae.
XX
PS   Disclosure; SEQ ID NO 1842; 932pp; English.
XX
CC   The invention describes a new isolated nucleic acid encoding a Klebsiella
CC   pneumoniae polypeptide. Also described are: a recombinant expression
CC   vector comprising the nucleic acid, operably linked to a transcription
CC   regulatory element; and a cell comprising the recombinant expression
CC   vector. The nucleic acid is useful for preparing a vaccine composition
CC   against Klebsiella pneumoniae. This sequence encodes a Klebsiella
CC   pneumoniae polypeptide of the invention

PT   New substantially purified Myxococcus xanthus nucleic acid molecule
PT   encoding a nitrite reductase, useful for determining gene expression,
PT   identifying mutations in a gene of interest, and for constructing
PT   mutations in a gene of interest.
XX
PS   Example 2; SEQ ID NO 5281; 25pp; English.
XX
CC   The invention relates to a substantially purified nucleic acid molecule
CC   encoding a nitrite reductase of SEQ ID NO. 11926. Further disclosed is a
CC   recombinant DNA construct for expression of a nitrite reductase gene in a
CC   plant cell, and a plant cell comprising the recombinant DNA construct.
CC   The nucleic acid is useful for determining gene expression, identifying
CC   mutations in a gene of interest, and for constructing mutations in a gene
CC   of interest. Sequences given in records for SEQ IDs 1850-9691 represent a
CC   set of about 7842 genes or partial genes from the genome of the bacterium
CC   Mxyococcus xanthus. Note: The sequence data for this patent did not form
CC   part of the printed specification, but was obtained in electronic format
CC   directly from USPTO

PT   Use of agonist of CX3C receptor in preparation of medicament for
PT   prevention or treatment of pain such as centrally mediated neuropathic
PT   pain, chronic, allodynia, hyperalgesic pain, or for promotion of nerve
PT   regeneration or repair.
XX
PS   Disclosure; Fig 1A-B; 36pp; English.
XX
CC   A claimed method of selecting candidate drugs for use in the prevention
CC   or treatment of pain comprises determining whether a compound is an
CC   agonist of a CXC3 receptor, and selecting such compounds. The receptor is
CC   preferably human CX3CR1. The agonist is useful in the treatment of pain,
CC   especially neuropathic pain, centrally mediated neuropathic pain, or
CC   chronic, allodynia, hyperalgesic pain, phantom pain or inflammatory pain,
CC   diabetic peripheral neuropathy, post-herpetic neuralgia, trigeminal
CC   neuralgia, post-stroke pain, multiple sclerosis-associated pain,
CC   neuropathy-associated pain such as in idiopathic or post-traumatic
CC   neuropathy and mononeuritis, HIV-associated neuropathic pain, cancer-
CC   associated neuropathic pain, carpal tunnel-associated neuropathic pain,
CC   spinal cord injury-associated pain, complex regional pain syndrome,
CC   fibromyalgia-associated neuropathic pain, lumbar and cervical pain,
CC   reflex sympathic dystrophy, phantom limb syndrome or peripheral nerve or
CC   spinal cord trauma, entrapment neuropathy, nerve transection including
CC   surgery, Lissauer tract section, limb amputation and stump pain,
CC   neuroma/tumor compression, arteriovenous malformation, vitamin B12
CC   deficiency, diabetic neuropathy, alcoholic neuropathy, pain caused by the
CC   side effects of anti-cancer and anti-AIDS therapies, HIV-associated
CC   neuropathic pain, pain associated with inflammation or infection of a
CC   tooth (toothache), visceral pain, pain caused by chemical burns, pain
CC   caused by local or systemic infection, pain caused by connective tissue
CC   disease such as rheumatoid arthritis, Wallenberg's syndrome, systemic
CC   lupus erythematosus, multiple sclerosis or polyarteritis nodosa, or pain
CC   is that associated with cancer, surgery, visceral damage, headache or
CC   trauma (all claimed). The agonist can also be used to promote nerve
CC   regeneration or repair. The agonist is fractalkine or its derivative. The
CC   present sequence is that of a murine CX3CR1 partial coding sequence.

CC   This sequence represents the gene encoding mouse CD40 receptor associated
CC   protein (CRAP). CRAP is a functional protein capable of interacting with
CC   the cytoplasmic domain of CD40 and/or other receptors of the tumour
CC   necrosis factor (TNF) receptor superfamily such as CD30 and TNF receptor
CC   I, where the protein has no homology to TNF receptor associated factor
CC   (TRAF)-proteins. The CD40 binding proteins can be used as modulators of
CC   the CD40 signalling pathway, especially to diagnose and treat TRAF-
CC   related, CD40-related, NF-kappaB related and/or Jun (kinase)-related
CC   diseases, and for the improvement of anti-tumour diseases. Diseases which
CC   may be treated include atherosclerosis, arthritis, multiple sclerosis,
CC   systemic lupus erythematosus, graft rejection, graft versus host disease,
CC   allergy, and autoimmune disease. The proteins can be used to sensitize
CC   tumour cells to anti-tumour treatments and to screen for compounds which
CC   interfere with the interaction of the proteins with other protein
CC   components of the TRAF, CD40 or NF-kappaB related pathway

PT Array containing probes for genes involved in mitochondrial biology,
PT useful for determining mitochondrial biology gene expression profiles for
PT use in diagnosing pathologies and identifying biochemical pathways.
XX
PS Claim 2; SEQ ID NO 2153; 201pp; English.
XX
CC The invention relates to a novel array comprising at least two isolated
CC nucleotide molecules, each molecule having a sequence capable of uniquely
CC hybridising to a nucleic acid molecule which is an expression product of
CC a gene involved in mitochondrial biology. The array comprises two or more
CC isolated nucleic acid molecules or spots, each molecule having a sequence
CC chosen from sequence of 994 human probes and 2046 mouse probes. An array
CC of the invention is useful for determining an expression profile of a
CC mouse or human sample containing nucleic acid, by contacting the array
CC with the sample under conditions allowing selective hybridisation, and
CC measuring hybridisation of nucleic acid in the sample to the array to
CC produce an expression profile. The array is also useful for determining
CC an expression profile of a first labelled sample containing nucleic acid
CC relative to a second, differently labelled sample containing nucleic
CC acid. The second sample is a reference or a standard. An array is useful
CC for determining an expression profile diagnostic of an energy-metabolism-
CC related physiological condition. An array of the invention is useful for
CC determining mitochondrial biology gene expression profiles of organisms,
CC such as human, mice and closely related species, tissue and organs of
CC such organisms, which are useful for determining expression profiles
CC diagnostic of energy metabolism-related physiological conditions,
CC diagnosing such physiological conditions, identifying biochemical
CC pathways, genes, and mutations involved in such physiological conditions,
CC identifying therapeutic agents useful for preventing and/or treating such
CC physiological conditions, evaluating and/or monitoring the efficacy of
CC such therapies, and creating and identifying animal models of human
CC energy metabolism-related physiological conditions. An array is also
CC useful for defining expression signatures or profiles for mitochondrial
CC diseases, as well as distinguishing clinical disorders that result from
CC oxidative phosphorylation (OXPHOS) dysfunction, oxidative stress,
CC apoptosis and aging. An array of the invention contains probes of genes
CC not previously recognised to participate in mitochondrial biology. The
CC sequences shown in ADD33224-ADD35260 represent murine mitochondrial DNA
CC clones used to make the probes of the invention. Some sequences are not
CC present, these are SEQ ID NO's 295, 1174, 1213, 1700, 1728, 1730, 1905,
CC 1906, 2408 and 2643.

PT Novel proteins used to treat inflammatory diseases, NF-kappaB related
PT diseases and for improvement of anti-tumor treatments.
XX
PS Claim 9; Page 37-39; 48pp; English.
XX
CC This sequence represents the gene encoding human CD40 receptor associated
CC protein (CRAP). CRAP is a functional protein capable of interacting with
CC the cytoplasmic domain of CD40 and/or other receptors of the tumour
CC necrosis factor (TNF) receptor superfamily such as CD30 and TNF receptor
CC I, where the protein has no homology to TNF receptor associated factor
CC (TRAF)-proteins. The CD40 binding proteins can be used as modulators of
CC the CD40 signalling pathway, especially to diagnose and treat TRAF-
CC related, CD40-related, NF-kappaB related and/or Jun (kinase)-related
CC diseases, and for the improvement of anti-tumour diseases. Diseases which
CC may be treated include atherosclerosis, arthritis, multiple sclerosis,
CC systemic lupus erythematosus, graft rejection, graft versus host disease,
CC allergy, and autoimmune disease. The proteins can be used to sensitize
CC tumour cells to anti-tumour treatments and to screen for compounds which
CC interfere with the interaction of the proteins with other protein
CC components of the TRAF, CD40 or NF-kappaB related pathway

PT Novel nucleic acids and polypeptides, useful for treating disorders such
PT as central nervous system injuries.
XX
PS Claim 1; SEQ ID NO 1200; 10078pp; English.
XX
CC The invention relates to human nucleic acids (AAI57798-AAI61369) and the
CC encoded polypeptides (AAM38642-AAM42213) with nootropic,
CC immunosuppressant and cytostatic activity. The polynucleotides are useful
CC in gene therapy. A composition containing a polypeptide or polynucleotide
CC of the invention may be used to treat diseases of the peripheral nervous
CC system, such as peripheral nervous injuries, peripheral neuropathy and
CC localised neuropathies and central nervous system diseases, such as
CC Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic
CC lateral sclerosis, and Shy-Drager Syndrome. Other uses include the
CC utilisation of the activities such as: Immune system suppression,
CC Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic
CC and thrombolytic activity, cancer diagnosis and therapy, drug screening,
CC assays for receptor activity, arthritis and inflammation, leukaemias and
CC C.N.S disorders. Note: The sequence data for this patent did not form
CC part of the printed specification

PT   New G-protein-coupled receptor-like polypeptides and polynucleotides,
PT   useful for treating diseases of ophthalmic, neurological, immunological
PT   and nephritic systems and hormonal dysfunction, cancer, atherosclerosis
PT   and diabetes.
XX
PS   Example 2; SEQ ID NO 889; 92pp; English.
XX
CC   The invention describes an isolated polynucleotide (I) comprising a fully
CC   defined (S1) of 749, 3188, 2484, 1169, 2936, 1467, 5773, 5714, 4041,
CC   1372, 3996, 3945, 2735, 1788, 585, 1782, 927, 5714 or 2282 nucleotides as
CC   given in the specification, its translated or protein coding portion, its
CC   extracellular portion or its active domain. The GPCR-like polypeptides
CC   and polynucleotides are useful for the treatment of diseases of
CC   ophthalmic, neurological, immunological and nephritic systems. They may
CC   also be used to treat hormonal dysfunction, cancer, atherosclerosis and
CC   diabetes. The antibodies are useful for detecting or quantitating the
CC   polypeptide in tissue. The polypeptides can also be used as molecular
CC   weight markers and as a food supplement. This sequence represents a human
CC   polynucleotide of the invention.

```
XX
CC   The invention relates to a polynucleotide comprising a sequence given in
CC   the specification, or its mature protein-coding portion, or its
CC   complement. The polynucleotide is useful for treating diseases e.g.,
CC   cancer or neurodegenerative diseases and many others listed in the
CC   specification. The present sequence represents a novel human cDNA. Note:
CC   The sequence data for this patent did not form part of the printed
CC   specification but was obtained in electronic format directly from USPTO
CC   at seqdata.uspto.gov/sequence.html?DocID=20030104529.

CC   The invention relates to human nucleic acids (AAI57798-AAI61369) and the
CC   encoded polypeptides (AAM38642-AAM42213) with nootropic,
CC   immunosuppressant and cytostatic activity. The polynucleotides are useful
CC   in gene therapy. A composition containing a polypeptide or polynucleotide
```

CC of the invention may be used to treat diseases of the peripheral nervous
CC system, such as peripheral nervous injuries, peripheral neuropathy and
CC localised neuropathies and central nervous system diseases, such as
CC Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic
CC lateral sclerosis, and Shy-Drager Syndrome. Other uses include the
CC utilisation of the activities such as: Immune system suppression,
CC Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic
CC and thrombolytic activity, cancer diagnosis and therapy, drug screening,
CC assays for receptor activity, arthritis and inflammation, leukaemias and
CC C.N.S disorders. Note: The sequence data for this patent did not form
CC part of the printed specification

PT New combination comprising cDNAs that are differentially expressed in
PT colon disorder, useful for diagnosing, treating, staging or monitoring
PT treatment for colon cancers.
XX
PS Claim 1; SEQ ID NO 88; 231pp; English.
XX
CC The invention relates to a combination comprising cDNAs that are
CC differentially expressed in colon disorder. The methods and compositions
CC of the present invention are useful for diagnosing, treating, staging or
CC monitoring treatment for colon cancer. They are also useful in high
CC throughput methods for using cDNAs to detect differential expression of
CC nucleic acids in a sample, screening molecules or compounds to identify a
CC ligand which specifically binds a cDNA and using a protein to screen
CC molecules or compounds to identify at least one ligand which specifically
CC binds the protein. The present sequence represents a human cDNA
CC differentially expressed in colon cancer.

PT Colon cancer associated gene sequences, referred to as colon cancer
PT antigens, useful for the treatment, prevention, and diagnosis of colon
PT disorders such as colon cancer.
XX
PS Claim 1; Page 597; 2104pp; English.
XX
CC AAC97991 to AAC98763 encode the human colon cancer associated proteins,
CC called human colon cancer antigens, given in AAB53234 to AAB54006. The
CC human colon cancer antigens can have cytostatic, cardioactive, muscular;
CC neuroprotective, immunomodulatory, gynaecological, gastrointestinal,
CC vulnerary, nephrotropic, antiinfective and antibacterial activities, and
CC can be used in gene therapy. The colon cancer antigen polynucleotides,
CC proteins and antibodies to the proteins are useful for the prevention,
CC treatment and diagnosis of colon disorders, such as colon cancer. The
CC polynucleotides may be used in diagnostics and research, such as for
CC chromosome identification, and as hybridisation probes. The proteins may
CC also be used to prevent diseases such as neural disorders, immune system
CC disorders, muscular disorders, reproductive disorders, gastrointestinal
CC disorders, wounds, renal disorders, infectious diseases, and
CC cardiovascular disorders. AAC98764 to AAC98772 and AAB54007 represent
CC sequences used in the exemplification of the present invention

CC This invention relates to novel human genes and gene product which are
CC implicated in certain disease states. Compounds which modulate the
CC proteins of the invention may have cytostatic, antiinflammatory,
CC ophthalmological, antiarteriosclerotic or vulnerary activities. The
CC sequences of the invention may be useful for gene therapy. The invention
CC may be useful for diagnosing or treating a hypoxia-regulated condition,
CC such as tumourigenesis, angiogenesis, apoptosis, inflammation,
CC erythropoiesis, or the biological response to hypoxia conditions
CC including processes such as glycolysis, gluconeogenesis, glucose
CC transportation, catecholamine synthesis, iron transport or nitric oxide
CC synthesis. The disease includes cancer, ischaemic conditions, reperfusion
CC injury, retinopathy, neonatal stress, pre-eclampsia, atherosclerosis,
CC inflammatory conditions or wound healing. The present sequence is that of
CC a disease related protein encoding DNA sequence of the invention.

PT renal disease, or demyelinating diseases of the central or peripheral
PT nervous system.
XX
PS Claim 1; SEQ ID NO 475; 2940pp; English.
XX
CC The invention relates to a novel isolated nucleic acid and the PRO
CC polypeptide encoded by it. A protein of the invention has
CC antiinflammatory, antiarthritic, antirheumatic, immunosuppressive,
CC osteopathic, antidiabetic, dermatological, antipsoriatic, antiallergic,
CC antiasthmatic, hepatotropic, and respiratory activity. A polynucleotide
CC of the invention may have a use in gene therapy. The PRO polypeptide, its
CC agonist, antagonist, or antibody that specifically binds to the
CC polypeptide is useful for treating an immune related disorder such as
CC systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis,
CC juvenile chronic arthritis, a spondyloarthropathy, systemic sclerosis, an
CC idiopathic inflammatory myopathy, Sjogren's syndrome, systemic
CC vasculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune
CC thrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal
CC disease, a demyelinating disease of the central or peripheral nervous
CC system, idiopathic demyelinating polyneuropathy, Guillain-Barre syndrome,
CC a chronic inflammatory demyelinating polyneuropathy, a hepatobiliary
CC disease, infectious or autoimmune chronic active hepatitis, primary
CC biliary cirrhosis, granulomatous hepatitis, sclerosing cholangitis,
CC inflammatory bowel disease, gluten-sensitive enteropathy, Whipple's
CC disease, an autoimmune or immune-mediated skin disease, a bullous skin
CC disease, erythema multiforme, contact dermatitis, psoriasis, an allergic
CC disease, asthma, allergic rhinitis, atopic dermatitis, food
CC hypersensitivity, urticaria, an immunologic disease of the lung,
CC eosinophilic pneumonia, idiopathic pulmonary fibrosis, hypersensitivity
CC pneumonitis, a transplantation associated disease, graft rejection or
CC graft-versus-host disease. The present sequence encodes a PRO protein of
CC the invention.

PT Biomarkers useful for predicting or determining the response of a mammal
PT to a cancer treatment comprising administration of a modulator of cyclin-
PT dependent kinase activity.
XX
PS Claim 5; SEQ ID NO 921; 141pp; English.
XX
CC This invention describes a novel method of predicting or determining
CC whether a mammal will respond or is responding to an anti-cancer agent
CC that modulates cyclin-dependent kinase (cdk) activity. The method
CC comprises measuring the level of one or more biomarkers selected from
CC 2774 biomarkers given in the specification (nucleotide sequence SEQ ID
CC NO:1246 (Genbank EST W28729) is especially preferred). The method of the
CC invention is utilized in a kit for determining or predicting whether
CC patient would be susceptible or resistant to treatment by an agent
CC modulating cdk activity. The invention also describes a method for
CC utilizing individualized genetic profiles for treating diseases and
CC disorders based on patient's response and molecular level, specialized
CC microarrays comprising the biomarkers described, antibodies directed
CC against the biomarkers and a cell culture model to identify biomarkers.
CC The cdk modulator is preferably N-5-[[5-(1,1-Dimethylethyl)-2-
CC oxazolyl]methyl]thio]-2-thiazolyl-4-piperidine carboxamide, 0.5-L-
CC tartaric acid salt. Note: The sequence data for this patent did not form
CC part of the printed specification, but was obtained in electronic format
CC directly from WIPO at ftp.wipo.int/pub/published_pct_sequences. This
CC sequence encodes a biomarker used in the method of the invention.

PT Primer sets for synthesizing polynucleotides, particularly the 5602 full-
PT length cDNAs defined in the specification, and for the detection and/or
PT diagnosis of the abnormality of the proteins encoded by the full-length
PT cDNAs.
XX
PS Claim 8; SEQ ID NO 13209; 2537pp + Sequence Listing; English.
XX
CC The present invention describes primer sets for synthesising 5602 full-
CC length cDNAs defined in the specification. Where a primer set comprises:
CC (a) an oligo-dT primer and an oligonucleotide complementary to the
CC complementary strand of a polynucleotide which comprises one of the 5602
CC nucleotide sequences defined in the specification, where the
CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC of an oligonucleotide comprising a sequence complementary to the
CC complementary strand of a polynucleotide which comprises a 5'-end
CC sequence and an oligonucleotide comprising a sequence complementary to a
CC polynucleotide which comprises a 3'-end sequence, where the
CC oligonucleotide comprises at least 15 nucleotides and the combination of
CC the 5'-end sequence/3'-end sequence is selected from those defined in the
CC specification. The primer sets can be used in antisense therapy and in
CC gene therapy. The primers are useful for synthesising polynucleotides,
CC particularly full-length cDNAs. The primers are also useful for the
CC detection and/or diagnosis of the abnormality of the proteins encoded by
CC the full-length cDNAs. The primers allow obtaining of the full-length
CC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and
CC AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893
CC represent human amino acid sequences; and AAH13629 to AAH13632 represent
CC oligonucleotides, all of which are used in the exemplification of the
CC present invention

PT Array containing probes for genes involved in mitochondrial biology,
PT useful for determining mitochondrial biology gene expression profiles for
PT use in diagnosing pathologies and identifying biochemical pathways.
XX
PS Claim 2; SEQ ID NO 2154; 201pp; English.
XX
CC The invention relates to a novel array comprising at least two isolated
CC nucleotide molecules, each molecule having a sequence capable of uniquely
CC hybridising to a nucleic acid molecule which is an expression product of
CC a gene involved in mitochondrial biology. The array comprises two or more
CC isolated nucleic acid molecules or spots, each molecule having a sequence
CC chosen from sequence of 994 human probes and 2046 mouse probes. An array
CC of the invention is useful for determining an expression profile of a
CC mouse or human sample containing nucleic acid, by contacting the array
CC with the sample under conditions allowing selective hybridisation, and
CC measuring hybridisation of nucleic acid in the sample to the array to
CC produce an expression profile. The array is also useful for determining
CC an expression profile of a first labelled sample containing nucleic acid
CC relative to a second, differently labelled sample containing nucleic
CC acid. The second sample is a reference or a standard. An array is useful
CC for determining an expression profile diagnostic of an energy-metabolism-
CC related physiological condition. An array of the invention is useful for
CC determining mitochondrial biology gene expression profiles of organisms,
CC such as human, mice and closely related species, tissue and organs of
CC such organisms, which are useful for determining expression profiles
CC diagnostic of energy metabolism-related physiological conditions,
CC diagnosing such physiological conditions, identifying biochemical
CC pathways, genes, and mutations involved in such physiological conditions,
CC identifying therapeutic agents useful for preventing and/or treating such
CC physiological conditions, evaluating and/or monitoring the efficacy of
CC such therapies, and creating and identifying animal models of human
CC energy metabolism-related physiological conditions. An array is also
CC useful for defining expression signatures or profiles for mitochondrial
CC diseases, as well as distinguishing clinical disorders that result from
CC oxidative phosphorylation (OXPHOS) dysfunction, oxidative stress,
CC apoptosis and aging. An array of the invention contains probes of genes
CC not previously recognised to participate in mitochondrial biology. The
CC sequences shown in ADD33224-ADD35260 represent murine mitochondrial DNA
CC clones used to make the probes of the invention. Some sequences are not
CC present, these are SEQ ID NO's 295, 1174, 1213, 1700, 1728, 1730, 1905,
CC 1906, 2408 and 2643.

PT New isolated polynucleotide and encoded polypeptides, useful in
PT diagnostics, forensics, gene mapping, identification of mutations
PT responsible for genetic disorders or other traits and to assess
PT biodiversity.
XX
PS Claim 1; SEQ ID NO 22058; 103pp; English.
XX
CC The invention relates to isolated polynucleotide (I) and polypeptide (II)
CC sequences. (I) is useful as hybridisation probes, polymerase chain
CC reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
CC and in recombinant production of (II). The polynucleotides are also used
CC in diagnostics as expressed sequence tags for identifying expressed
CC genes. (I) is useful in gene therapy techniques to restore normal
CC activity of (II) or to treat disease states involving (II). (II) is
CC useful for generating antibodies against it, detecting or quantitating a
CC polypeptide in tissue, as molecular weight markers and as a food
CC supplement. (II) and its binding partners are useful in medical imaging
CC of sites expressing (II). (I) and (II) are useful for treating disorders
CC involving aberrant protein expression or biological activity. The
CC polypeptide and polynucleotide sequences have applications in
CC diagnostics, forensics, gene mapping, identification of mutations
CC responsible for genetic disorders or other traits to assess biodiversity
CC and to produce other types of data and products dependent on DNA and
CC amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic
CC coding sequences of the invention. Note: The sequence data for this
CC patent did not appear in the printed specification, but was obtained in
CC electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

PT New breast tumor protein genes used, in vaccines for immunotherapy, or
PT for diagnosis of breast cancer.
XX
PS Claim 3; Page 60; 70pp; English.
XX
CC This sequence encodes a human breast tumour protein immunogenic fragment
CC of the invention. The polypeptides or nucleic acids encoding them are
CC useful in vaccines and pharmaceutical compositions for manufacture of
CC medicaments for inhibiting the development of breast cancer in a patient.
CC They can also be used to treat breast cancer. Antibodies against these
CC polypeptides can be used to detect and monitor progression of breast
CC cancer in patients. Primers and probes derived from the polynucleotides
CC encoding the breast proteins are useful for detection of breast cancer.
CC Peripheral blood cells from a patient incubated in the presence of at
CC least one polypeptide, such that T cells proliferate, are useful in
CC manufacture of a medicament for treating breast cancer in a patient.
CC Antigen presenting cells incubated in the presence of at least one
CC polypeptide are also useful for treating breast cancer

PT Polynucleotides encoding breast tumor polypeptides, useful for treating
PT breast cancer or stimulating an immune response.
XX
PS Claim 1; Page 131; 150pp; English.
XX
CC The invention relates to polynucleotides encoding breast tumour
CC polypeptides. The sequences are useful for treating cancer, preferably
CC breast cancer, in a patient or for stimulating an immune response. The
CC polynucleotides and polypeptides are also useful in the diagnosis and
CC monitoring of breast cancer. A method for detecting the presence of a
CC cancer in a patient, comprises obtaining a biological sample from the
CC patient, contacting the biological sample with a binding agent that binds
CC to a breast tumour polypeptide, detecting in the sample an amount of
CC polypeptide that binds to the binding agent, and comparing the amount of
CC polypeptide to a predetermined cut-off value, therefore determining the
CC presence of a cancer in the patient. Sequences ABK28920-ABK29025
CC represent cDNA clones encoding human breast tumour polypeptides of the
CC invention

PT New isolated nucleic acids and polypeptides capable of eliciting a
PT humoral and/or cellular immune response, useful for diagnosing,
PT preventing or treating cancer, particularly colon cancer.
XX
PS Claim 1; SEQ ID NO 1067; 87pp; English.
XX
CC The invention relates to polynucleotide and polypeptide sequences
CC associated with cancer, particularly colon cancer. Also disclosed are (i)
CC an expression vector comprising the polynucleotide, (ii) a host cell
CC transformed or transfected with the expression vector, (iii) an isolated
CC antibody, or its antigen-binding fragment, which specifically binds to
CC the polypeptide, (iv) a method of detecting or determining the presence
CC of cancer in a patient, (v) a fusion protein comprising at least one of
CC the polypeptides, (vi) an oligonucleotide that hybridises to the
CC polynucleotide sequence under highly stringent conditions, and (vii) a
CC method of stimulating and/or expanding T cells specific for a tumour
CC protein. The polypeptide specifically comprises the amino acid sequence
CC of C634S, C635S, C637S, C640S, C636S or one of the potential open reading
CC frames (ORFs) of C636S. These polypeptides are encoded by the
CC polynucleotide sequences, where both are capable of eliciting a humoral
CC and/or cellular immune response. The polynucleotides, polypeptides, and
CC antibodies are useful for diagnosing, preventing or treating cancer,
CC particularly colon cancer. The polynucleotide and polypeptide sequences
CC are also useful in DNA strand invasion, antisense inhibition, mutational
CC analysis, nucleic acid purification, isolation of transcriptionally
CC active genes, blocking or transcription factor binding, genome cleavage
CC or in situ hybridisation, and as enhancers of transcription or
CC biomarkers. This sequence represents a human colon cancer associated
CC cDNA. Note: The sequence data for this patent was obtained in electronic
CC format directly from the USPTO web site at seqdata.uspto.gov

PT New isolated nucleic acids and polypeptides capable of eliciting a
PT humoral and/or cellular immune response, useful for diagnosing,
PT preventing or treating cancer, particularly colon cancer.
XX
PS Claim 1; SEQ ID NO 1067; 244pp; English.
XX
CC The invention relates to a new isolated nucleic acid. The nucleic acids,
CC polypeptides, antibodies are useful for diagnosing, preventing or
CC treating cancer, particularly colon cancer. The nucleic acid and
CC polypeptides are also useful in DNA strand invasion, antisense
CC inhibition, mutational analysis, nucleic acid purification, isolation of
CC transcriptionally active genes, blocking or transcription factor binding,
CC genome cleavage or in situ hybridization, and as enhancers of
CC transcription or biomarkers. The kits are useful for detecting antibody
CC binding. The present sequence represents a human cDNA encoding a colon
CC cancer protein.

PT New isolated nucleic acids and polypeptides capable of eliciting a
PT humoral and/or cellular immune response, useful for diagnosing,
PT preventing or treating cancer, particularly colon cancer.
XX
PS Claim 1; SEQ ID NO 1070; 87pp; English.
XX
CC The invention relates to polynucleotide and polypeptide sequences
CC associated with cancer, particularly colon cancer. Also disclosed are (i)
CC an expression vector comprising the polynucleotide, (ii) a host cell
CC transformed or transfected with the expression vector, (iii) an isolated
CC antibody, or its antigen-binding fragment, which specifically binds to
CC the polypeptide, (iv) a method of detecting or determining the presence
CC of cancer in a patient, (v) a fusion protein comprising at least one of
CC the polypeptides, (vi) an oligonucleotide that hybridises to the
CC polynucleotide sequence under highly stringent conditions, and (vii) a
CC method of stimulating and/or expanding T cells specific for a tumour
CC protein. The polypeptide specifically comprises the amino acid sequence
CC of C634S, C635S, C637S, C640S, C636S or one of the potential open reading
CC frames (ORFs) of C636S. These polypeptides are encoded by the
CC polynucleotide sequences, where both are capable of eliciting a humoral
CC and/or cellular immune response. The polynucleotides, polypeptides, and
CC antibodies are useful for diagnosing, preventing or treating cancer,
CC particularly colon cancer. The polynucleotide and polypeptide sequences
CC are also useful in DNA strand invasion, antisense inhibition, mutational
CC analysis, nucleic acid purification, isolation of transcriptionally
CC active genes, blocking or transcription factor binding, genome cleavage
CC or in situ hybridisation, and as enhancers of transcription or
CC biomarkers. This sequence represents a human colon cancer associated
CC cDNA. Note: The sequence data for this patent was obtained in electronic
CC format directly from the USPTO web site at seqdata.uspto.gov

PT   New isolated nucleic acids and polypeptides capable of eliciting a
PT   humoral and/or cellular immune response, useful for diagnosing,
PT   preventing or treating cancer, particularly colon cancer.
XX
PS   Claim 1; SEQ ID NO 1084; 87pp; English.
XX
CC   The invention relates to polynucleotide and polypeptide sequences
CC   associated with cancer, particularly colon cancer. Also disclosed are (i)
CC   an expression vector comprising the polynucleotide, (ii) a host cell
CC   transformed or transfected with the expression vector, (iii) an isolated
CC   antibody, or its antigen-binding fragment, which specifically binds to
CC   the polypeptide, (iv) a method of detecting or determining the presence
CC   of cancer in a patient, (v) a fusion protein comprising at least one of
CC   the polypeptides, (vi) an oligonucleotide that hybridises to the
CC   polynucleotide sequence under highly stringent conditions, and (vii) a
CC   method of stimulating and/or expanding T cells specific for a tumour
CC   protein. The polypeptide specifically comprises the amino acid sequence
CC   of C634S, C635S, C637S, C640S, C636S or one of the potential open reading
CC   frames (ORFs) of C636S. These polypeptides are encoded by the
CC   polynucleotide sequences, where both are capable of eliciting a humoral
CC   and/or cellular immune response. The polynucleotides, polypeptides, and
CC   antibodies are useful for diagnosing, preventing or treating cancer,
CC   particularly colon cancer. The polynucleotide and polypeptide sequences
CC   are also useful in DNA strand invasion, antisense inhibition, mutational
CC   analysis, nucleic acid purification, isolation of transcriptionally
CC   active genes, blocking or transcription factor binding, genome cleavage
CC   or in situ hybridisation, and as enhancers of transcription or
CC   biomarkers. This sequence represents a human colon cancer associated
CC   cDNA. Note: The sequence data for this patent was obtained in electronic
CC   format directly from the USPTO web site at seqdata.uspto.gov

PT New isolated nucleic acids and polypeptides capable of eliciting a
PT humoral and/or cellular immune response, useful for diagnosing,
PT preventing or treating cancer, particularly colon cancer.
XX
PS Claim 1; SEQ ID NO 983; 87pp; English.
XX
CC The invention relates to polynucleotide and polypeptide sequences
CC associated with cancer, particularly colon cancer. Also disclosed are (i)
CC an expression vector comprising the polynucleotide, (ii) a host cell
CC transformed or transfected with the expression vector, (iii) an isolated
CC antibody, or its antigen-binding fragment, which specifically binds to
CC the polypeptide, (iv) a method of detecting or determining the presence
CC of cancer in a patient, (v) a fusion protein comprising at least one of
CC the polypeptides, (vi) an oligonucleotide that hybridises to the
CC polynucleotide sequence under highly stringent conditions, and (vii) a
CC method of stimulating and/or expanding T cells specific for a tumour
CC protein. The polypeptide specifically comprises the amino acid sequence
CC of C634S, C635S, C637S, C640S, C636S or one of the potential open reading
CC frames (ORFs) of C636S. These polypeptides are encoded by the
CC polynucleotide sequences, where both are capable of eliciting a humoral
CC and/or cellular immune response. The polynucleotides, polypeptides, and
CC antibodies are useful for diagnosing, preventing or treating cancer,
CC particularly colon cancer. The polynucleotide and polypeptide sequences
CC are also useful in DNA strand invasion, antisense inhibition, mutational
CC analysis, nucleic acid purification, isolation of transcriptionally
CC active genes, blocking or transcription factor binding, genome cleavage
CC or in situ hybridisation, and as enhancers of transcription or
CC biomarkers. This sequence represents a human colon cancer associated
CC cDNA. Note: The sequence data for this patent was obtained in electronic
CC format directly from the USPTO web site at seqdata.uspto.gov

PT Primer sets for synthesizing polynucleotides, particularly the 5602 full-
PT length cDNAs defined in the specification, and for the detection and/or
PT diagnosis of the abnormality of the proteins encoded by the full-length

PT cDNAs.
XX
PS Claim 1; SEQ ID NO 4908; 2537pp + Sequence Listing; English.
XX
CC The present invention describes primer sets for synthesising 5602 full-
CC length cDNAs defined in the specification. Where a primer set comprises:
CC (a) an oligo-dT primer and an oligonucleotide complementary to the
CC complementary strand of a polynucleotide which comprises one of the 5602
CC nucleotide sequences defined in the specification, where the
CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC of an oligonucleotide comprising a sequence complementary to the
CC complementary strand of a polynucleotide which comprises a 5'-end
CC sequence and an oligonucleotide comprising a sequence complementary to a
CC polynucleotide which comprises a 3'-end sequence, where the
CC oligonucleotide comprises at least 15 nucleotides and the combination of
CC the 5'-end sequence/3'-end sequence is selected from those defined in the
CC specification. The primer sets can be used in antisense therapy and in
CC gene therapy. The primers are useful for synthesising polynucleotides,
CC particularly full-length cDNAs. The primers are also useful for the
CC detection and/or diagnosis of the abnormality of the proteins encoded by
CC the full-length cDNAs. The primers allow obtaining of the full-length
CC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and
CC AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893
CC represent human amino acid sequences; and AAH13629 to AAH13632 represent
CC oligonucleotides, all of which are used in the exemplification of the
CC present invention

CC method of stimulating and/or expanding T cells specific for a tumour
CC protein. The polypeptide specifically comprises the amino acid sequence
CC of C634S, C635S, C637S, C640S, C636S or one of the potential open reading
CC frames (ORFs) of C636S. These polypeptides are encoded by the
CC polynucleotide sequences, where both are capable of eliciting a humoral
CC and/or cellular immune response. The polynucleotides, polypeptides, and
CC antibodies are useful for diagnosing, preventing or treating cancer,
CC particularly colon cancer. The polynucleotide and polypeptide sequences
CC are also useful in DNA strand invasion, antisense inhibition, mutational
CC analysis, nucleic acid purification, isolation of transcriptionally

```
CC   active genes, blocking or transcription factor binding, genome cleavage
CC   or in situ hybridisation, and as enhancers of transcription or
CC   biomarkers. This sequence represents a human colon cancer.associated
CC   cDNA. Note: The sequence data for this patent was obtained in electronic
CC   format directly from the USPTO web site at seqdata.uspto.gov

XX
PS Claim 1; Page 298; 675pp; English.
XX
CC AAX40438 to AAX40715 represent 5' expressed sequence tags (ESTs) for
CC human secreted proteins expressed in prostate, and encode the proteins
CC given in AAY11716 to AAY11993 respectively. The proteins given represent
CC the signal peptide and an N-terminal fragment of a secreted protein. The
CC nucleic acid sequences can be used for producing secreted human gene
CC products. They can also be used to develop products for diagnosis and
CC therapy. The proteins obtained may have cytokine activity, cell
CC proliferation and differentiation activity, haematopoiesis regulating
CC activity, tissue growth regulating activity, reproductive hormone
CC regulating activity, chemotactic/chemokinetic activity, haemostatic and
CC thrombolytic activity, receptor/ligand activity, anti-inflammatory
CC activity, tumour inhibition activity or other activities. The products
CC can be used in forensic, gene therapy and chromosome mapping procedures.
CC The sequences can also be used for obtaining corresponding promoter
CC sequences. The nucleic acids encoding the signal peptides can be used for
CC directing extracellular secretion of a polypeptide or the insertion of a
CC polypeptide into a membrane, or importing a polypeptide into a cell

PT New isolated polynucleotide and encoded polypeptides, useful in
PT diagnostics, forensics, gene mapping, identification of mutations
PT responsible for genetic disorders or other traits and to assess
PT biodiversity.
XX
PS Claim 1; SEQ ID NO 22059; 103pp; English.
XX
CC The invention relates to isolated polynucleotide (I) and polypeptide (II)
CC sequences. (I) is useful as hybridisation probes, polymerase chain
CC reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
CC and in recombinant production of (II). The polynucleotides are also used
CC in diagnostics as expressed sequence tags for identifying expressed
CC genes. (I) is useful in gene therapy techniques to restore normal
CC activity of (II) or to treat disease states involving (II). (II) is
CC useful for generating antibodies against it, detecting or quantitating a
CC polypeptide in tissue, as molecular weight markers and as a food
CC supplement. (II) and its binding partners are useful in medical imaging
CC of sites expressing (II). (I) and (II) are useful for treating disorders
CC involving aberrant protein expression or biological activity. The
CC polypeptide and polynucleotide sequences have applications in
CC diagnostics, forensics, gene mapping, identification of mutations
CC responsible for genetic disorders or other traits to assess biodiversity
CC and to produce other types of data and products dependent on DNA and
CC amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic
CC coding sequences of the invention. Note: The sequence data for this
CC patent did not appear in the printed specification, but was obtained in
CC electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

PT New isolated nucleic acids and polypeptides capable of eliciting a
PT humoral and/or cellular immune response, useful for diagnosing,
PT preventing or treating cancer, particularly colon cancer.
XX
PS Claim 1; SEQ ID NO 826; 87pp; English.
XX
CC The invention relates to polynucleotide and polypeptide sequences
CC associated with cancer, particularly colon cancer. Also disclosed are (i)
CC an expression vector comprising the polynucleotide, (ii) a host cell
CC transformed or transfected with the expression vector, (iii) an isolated
CC antibody, or its antigen-binding fragment, which specifically binds to
CC the polypeptide, (iv) a method of detecting or determining the presence
CC of cancer in a patient, (v) a fusion protein comprising at least one of
CC the polypeptides, (vi) an oligonucleotide that hybridises to the
CC polynucleotide sequence under highly stringent conditions, and (vii) a
CC method of stimulating and/or expanding T cells specific for a tumour
CC protein. The polypeptide specifically comprises the amino acid sequence
CC of C634S, C635S, C637S, C640S, C636S or one of the potential open reading
CC frames (ORFs) of C636S. These polypeptides are encoded by the
CC polynucleotide sequences, where both are capable of eliciting a humoral
CC and/or cellular immune response. The polynucleotides, polypeptides, and
CC antibodies are useful for diagnosing, preventing or treating cancer,
CC particularly colon cancer. The polynucleotide and polypeptide sequences
CC are also useful in DNA strand invasion, antisense inhibition, mutational
CC analysis, nucleic acid purification, isolation of transcriptionally
CC active genes, blocking or transcription factor binding, genome cleavage
CC or in situ hybridisation, and as enhancers of transcription or
CC biomarkers. This sequence represents a human colon cancer associated
CC cDNA. Note: The sequence data for this patent was obtained in electronic
CC format directly from the USPTO web site at seqdata.uspto.gov

PT   New isolated nucleic acids and polypeptides capable of eliciting a
PT   humoral and/or cellular immune response, useful for diagnosing,
PT   preventing or treating cancer, particularly colon cancer.
XX
PS   Claim 1; SEQ ID NO 826; 244pp; English.
XX
CC   The invention relates to a new isolated nucleic acid. The nucleic acids,
CC   polypeptides, antibodies are useful for diagnosing, preventing or
CC   treating cancer, particularly colon cancer. The nucleic acid and
CC   polypeptides are also useful in DNA strand invasion, antisense
CC   inhibition, mutational analysis, nucleic acid purification, isolation of
CC   transcriptionally active genes, blocking or transcription factor binding,
CC   genome cleavage or in situ hybridization, and as enhancers of
CC   transcription or biomarkers. The kits are useful for detecting antibody
CC   binding. The present sequence represents a human cDNA encoding a colon
CC   cancer protein.

XX
PT Novel isolated polynucleotide encoding a polypeptide comprising a portion
PT of colon tumor protein, useful for detection, diagnosis and therapy of
PT human colon cancer.
XX
PS Claim 1; Page 182; 220pp; English.
XX
CC The invention relates to an isolated polynucleotide (I) encoding a
CC polypeptide (II) comprising at least a portion of a colon tumour protein.
CC (I), (II) and antibody (III) to (II) are useful for determining the
CC presence of a cancer in a patient. (I), (II) or antigen presenting cells
CC expressing (I) is useful for stimulating and/or expanding T cells
CC specific for a tumour protein, by contacting T cells with (I), (II) or
CC antigen-presenting cells that express (I), under conditions and for a
CC time sufficient to permit the stimulation and/or expansion of T cells.
CC (I), (II), or antigen presenting cells that express (II) are useful for
CC treating colon cancer in a patient by incubating CD4+ and/or CD8+ T cells
CC isolated from a patient with (I), (II) or antigen presenting cells that
CC express (II), such that T cells proliferate, and administering to the
CC patient an effective amount of the proliferated T cells, thus inhibiting
CC the development of a cancer in the patient. (I) or (II) is useful in
CC vaccines and pharmaceutical compositions for prevention and treatment of
CC colon malignancies and for the diagnosis and monitoring of such cancers.
CC (I), (II) or (III) is useful for detection, diagnosis and/or therapy of
CC human colon cancer. (I) is useful as a probe or primer for nucleic acid
CC hybridisation, and in the design and preparation of ribozyme molecules
CC for inhibiting expression of (II) in tumour cells. ABK27564-ABK27807

PT New isolated polynucleotide and pancreatic tumor polypeptides, useful for
PT diagnosing, preventing and/or treating cancer, particularly pancreatic
PT cancer.
XX
PS Claim 1; SEQ ID NO 1367; 300pp + Sequence Listing; English.
XX
CC The invention relates to an isolated polynucleotide (I) comprising: (a)
CC any of a group of over 4000 nucleotide sequences (ABV94628-ABV99145); (b)
CC complements of (a); (c) sequences consisting of at least 20 contiguous
CC residues of (a); (d) sequences that hybridize to (a), under moderately
CC stringent conditions; (e) sequences having at least 75% or 90% identity
CC to (a); or (f) degenerate variants of (a). Polypeptides (ABP68596-
CC ABP68637) encoded by (I) and oligonucleotide can be used to detect cancer
CC in a patient and compositions comprising polypeptides, polynucleotides,
CC antibodies, fusion proteins, T cell populations and antigen presenting
CC cells expressing the polypeptide are useful in treating pancreatic cancer
CC and stimulating an immune response. The polynucleotides can be used as
CC probes or primers for nucleic acid hybridisation, in the design and
CC preparation of ribozyme molecules for inhibiting expression of the tumour
CC polypeptides and proteins in the tumour cells, in vaccines and for gene
CC therapy. Note: The sequence data for this patent did not form part of the
CC printed specification, but was obtained in electronic format directly

CC AAX40826 to AAX41093 represent 5' expressed sequence tags (ESTs) for
CC human secreted proteins, and encode the proteins given in AAY01602 and
CC AAY11994 to AAY12260, respectively. The proteins given represent the
CC signal peptide and an N-terminal fragment of a secreted protein. The
CC nucleic acid sequences can be used for producing secreted human gene
CC products. They can also be used to develop products for diagnosis and
CC therapy. The proteins obtained may have cytokine activity, cell
CC proliferation/differentiation activity, haematopoiesis regulating
CC activity, tissue growth regulating activity, reproductive hormone
CC regulating activity, chemotactic/chemokinetic activity, haemostatic and
CC thrombolytic activity, receptor/ligand activity, anti-inflammatory
CC activity, tumour inhibition activity or other activities. The products
CC can be used in forensic, gene therapy and chromosome mapping procedures.
CC The sequences can also be used for obtaining corresponding promoter
CC sequences. The nucleic acids encoding the signal peptide can be used for
CC directing extracellular secretion of a polypeptide or the insertion of a
CC polypeptide into a membrane, or importing a polypeptide into a cell

XX
PS Claim 25; SEQ ID NO 5244; 487pp; English.
XX
CC The present invention relates to human single exon nucleic acid probes
CC (SENP). The present sequence is one such probe. The SENPs are derived
CC from human HeLa cells. The SENPs can be used to produce a single exon
CC microarray, which can be used for measuring human gene expression in a
CC sample derived from human cervical epithelial cells. By measuring gene
CC expression, the probes are therefore useful in grading and/or staging of
CC diseases of the cervix, notably cervical cancer. Note: The sequence data
CC for this patent did not form part of the printed specification, but was
CC obtained in electronic format directly from WIPO at

PT   Predicting the liver toxicity in an individual to an agent by measuring
```

PT the expression of one or more liver toxicity predictive genes in the
PT sample from the individual treated with the agent.
XX
PS Claim 7; Fig 4; 336pp; English.
XX
CC The present invention describes a method for predicting the liver
CC toxicity in an individual to an agent. The method comprises: (a)
CC obtaining a biological sample from the individual treated with the agent;
CC (b) measuring the expression of one or more liver toxicity predictive
CC genes in the sample; and (c) using the test expression profile with a set
CC of reference expression profiles in a Predictive Model to determine
CC whether the agent will induce liver toxicity in the individual. Also
CC described: (1) predicting the liver toxicity of an agent using an in
CC vitro system; (2) predicting the liver toxicity in a biological sample
CC from an individual, in vitro cell cultures or explants to an agent via a
CC programmable machine; (3) a computer program product for enabling a
CC computer to perform Predictive Model analysis for liver toxicity on a
CC biological sample from an individual, in vitro cell cultures or explants
CC to an agent; (4) a computer system adopted to predict liver toxicity in a
CC biological system from an individual, in vitro cell cultures or explants
CC to an agent; (5) a computer program product for predicting liver toxicity
CC from a test sample expression profile; (6) mining genes predictive of
CC liver toxicity; (7) an integrated system for predicting liver toxicity;
CC and (8) identifying one or more liver inflammation predictive genes. The
CC method is useful for predicting the liver toxicity in an individual to an
CC agent. The present sequence represents a liver toxicity predictive gene
CC sequence that represents a 24 hour combo 3 gene, which is specifically
CC claimed in the exemplification of the present invention.

PT Predicting kidney toxicity in an individual to an agent, useful for
PT predicting toxic responses to one or more agents comprising measuring the
PT expression of one or more kidney toxicity predictive genes.
XX
PS Claim 1; Page 350; 388pp; English.
XX
CC This invention relates to novel isolated kidney toxicity predictive genes
CC and methods of using such genes in the field of toxicology. Specifically,
CC it refers to novel genes that can be used for generating predictive
CC models, which in turn are useful for predicting the in vivo toxic
CC response to one or more agents. The present invention describes obtaining
CC a gene expression profile from a biological sample and using the
CC predictive model to determine whether an agent will induce kidney
CC toxicity in the individual. As such, it can be used to detect any toxic
CC effects that may be manifested as long lasting or chronic consequences
CC including irreversible toxicity or carcinogenesis. Furthermore, the
CC predictive genes can be considered as therapeutic targets for toxic
CC damage or to ameliorate specific disease conditions such as kidney tubule
CC necrosis or acute renal failure, as well as for additional screening
CC assays. This polynucleotide sequence is the partial gene sequence of a
CC rat kidney toxicity predictive gene of the invention.

XX
CC The present invention describes a method for predicting the liver
CC toxicity in an individual to an agent. The method comprises: (a)
CC obtaining a biological sample from the individual treated with the agent;
CC (b) measuring the expression of one or more liver toxicity predictive
CC genes in the sample; and (c) using the test expression profile with a set
CC of reference expression profiles in a Predictive Model to determine
CC whether the agent will induce liver toxicity in the individual. Also
CC described: (1) predicting the liver toxicity of an agent using an in
CC vitro system; (2) predicting the liver toxicity in a biological sample
CC from an individual, in vitro cell cultures or explants to an agent via a
CC programmable machine; (3) a computer program product for enabling a
CC computer to perform Predictive Model analysis for liver toxicity on a
CC biological sample from an individual, in vitro cell cultures or explants
CC to an agent; (4) a computer system adopted to predict liver toxicity in a
CC biological system from an individual, in vitro cell cultures or explants
CC to an agent; (5) a computer program product for predicting liver toxicity
CC from a test sample expression profile; (6) mining genes predictive of
CC liver toxicity; (7) an integrated system for predicting liver toxicity;
CC and (8) identifying one or more liver inflammation predictive genes. The
CC method is useful for predicting the liver toxicity in an individual to an
CC agent. The present sequence represents a liver toxicity predictive gene
CC sequence that represents a 24 hour combo 3 gene, which is specifically
CC claimed in the exemplification of the present invention.

PT New composition comprises cDNAs useful for detecting altered expression
PT of genes in a toxic response of the spleen or for predicting toxic
PT responses to one or more agents including lymphoid tissue types or other
PT species.
XX
PS Claim 1; SEQ ID NO 216; 249pp; English.
XX
CC The invention relates to a novel composition comprising cDNAs for use in
CC detecting the altered expression of genes in a toxic response of the
CC spleen, where the cDNAs comprises 50-816 base pairs (ADR91045-ADR91348)
CC or their complete complements. The invention further comprises:
CC monitoring the treatment of compound toxicity in a sample; predicting the
CC spleen toxicity in an individual to an agent; predicting the spleen
CC toxicity of an agent using an in vitro system; a computer program product
CC for predicting spleen toxicity from an expression profile of nucleic
CC acids from a sample under test, comprising a computer readable medium
CC bearing an encrypted training data set, encrypted lists of genes selected
CC from the cDNAs, and a predictive model for causing a general purpose
CC computer to predict the spleen toxicity of the sample based upon the
CC training data set, the list of genes selected from the cDNAs, and the
CC expression profile of nucleic acids from the sample; and an integrated
CC system for predicting spleen toxicity, comprising means for measuring
CC gene expression profiles of spleen predictive genes from samples exposed
CC to the test agent and a computer system operably linked to the means that
CC is capable of implementing a predictive model. The composition comprising
CC cDNAs is useful for detecting altered expression of genes in a toxic
CC response of the spleen or for predicting toxic responses to one or more
CC agents including lymphoid tissue types or other species. The predictive
CC genes and models of the invention are useful for identifying and
CC evaluating various in vitro systems that can be used to accurately
CC predict in vivo toxicity. This polynucleotide sequence represents one of
CC the genes predictive for spleen necrosis of the invention.

XX
CC The present invention describes a method for predicting the liver
CC toxicity in an individual to an agent. The method comprises: (a)
CC obtaining a biological sample from the individual treated with the agent;
CC (b) measuring the expression of one or more liver toxicity predictive
CC genes in the sample; and (c) using the test expression profile with a set
CC of reference expression profiles in a Predictive Model to determine
CC whether the agent will induce liver toxicity in the individual. Also
CC described: (1) predicting the liver toxicity of an agent using an in

CC vitro system; (2) predicting the liver toxicity in a biological sample
CC from an individual, in vitro cell cultures or explants to an agent via a
CC programmable machine; (3) a computer program product for enabling a
CC computer to perform Predictive Model analysis for liver toxicity on a
CC biological sample from an individual, in vitro cell cultures or explants
CC to an agent; (4) a computer system adopted to predict liver toxicity in a
CC biological system from an individual, in vitro cell cultures or explants
CC to an agent; (5) a computer program product for predicting liver toxicity
CC from a test sample expression profile; (6) mining genes predictive of
CC liver toxicity; (7) an integrated system for predicting liver toxicity;
CC and (8) identifying one or more liver inflammation predictive genes. The
CC method is useful for predicting the liver toxicity in an individual to an
CC agent. The present sequence represents a liver toxicity predictive gene
CC sequence that represents a 24 hour combo 3 gene, which is specifically
CC claimed in the exemplification of the present invention.

PT   Predicting the liver toxicity in an individual to an agent by measuring
PT   the expression of one or more liver toxicity predictive genes in the
PT   sample from the individual treated with the agent.
XX
PS   Claim 7; Fig 4; 336pp; English.
XX
CC   The present invention describes a method for predicting the liver
CC   toxicity in an individual to an agent. The method comprises: (a)
CC   obtaining a biological sample from the individual treated with the agent;
CC   (b) measuring the expression of one or more liver toxicity predictive
CC   genes in the sample; and (c) using the test expression profile with a set
CC   of reference expression profiles in a Predictive Model to determine
CC   whether the agent will induce liver toxicity in the individual. Also
CC   described: (1) predicting the liver toxicity of an agent using an in
CC   vitro system; (2) predicting the liver toxicity in a biological sample
CC   from an individual, in vitro cell cultures or explants to an agent via a
CC   programmable machine; (3) a computer program product for enabling a
CC   computer to perform Predictive Model analysis for liver toxicity on a
CC   biological sample from an individual, in vitro cell cultures or explants
CC   to an agent; (4) a computer system adopted to predict liver toxicity in a
CC   biological system from an individual, in vitro cell cultures or explants
CC   to an agent; (5) a computer program product for predicting liver toxicity
CC   from a test sample expression profile; (6) mining genes predictive of
CC   liver toxicity; (7) an integrated system for predicting liver toxicity;
CC   and (8) identifying one or more liver inflammation predictive genes. The
CC   method is useful for predicting the liver toxicity in an individual to an
CC   agent. The present sequence represents a liver toxicity predictive gene
CC   sequence that represents a 24 hour combo 3 gene, which is specifically
CC   claimed in the exemplification of the present invention.

PT   Predicting the liver toxicity in an individual to an agent by measuring
PT   the expression of one or more liver toxicity predictive genes in the
PT   sample from the individual treated with the agent.
XX
PS   Claim 7; Fig 4; 336pp; English.
XX
CC   The present invention describes a method for predicting the liver
CC   toxicity in an individual to an agent. The method comprises: (a)
CC   obtaining a biological sample from the individual treated with the agent;
CC   (b) measuring the expression of one or more liver toxicity predictive
CC   genes in the sample; and (c) using the test expression profile with a set
CC   of reference expression profiles in a Predictive Model to determine
CC   whether the agent will induce liver toxicity in the individual. Also
CC   described: (1) predicting the liver toxicity of an agent using an in
CC   vitro system; (2) predicting the liver toxicity in a biological sample
CC   from an individual, in vitro cell cultures or explants to an agent via a
CC   programmable machine; (3) a computer program product for enabling a
CC   computer to perform Predictive Model analysis for liver toxicity on a
CC   biological sample from an individual, in vitro cell cultures or explants
CC   to an agent; (4) a computer system adopted to predict liver toxicity in a
CC   biological system from an individual, in vitro cell cultures or explants
CC   to an agent; (5) a computer program product for predicting liver toxicity
CC   from a test sample expression profile; (6) mining genes predictive of
CC   liver toxicity; (7) an integrated system for predicting liver toxicity;
CC   and (8) identifying one or more liver inflammation predictive genes. The
CC   method is useful for predicting the liver toxicity in an individual to an
CC   agent. The present sequence represents a liver toxicity predictive gene
CC   sequence that represents a 24 hour combo 3 gene, which is specifically
CC   claimed in the exemplification of the present invention.

PS Claim 7; Fig 4; 336pp; English.
XX
CC The present invention describes a method for predicting the liver
CC toxicity in an individual to an agent. The method comprises: (a)
CC obtaining a biological sample from the individual treated with the agent;
CC (b) measuring the expression of one or more liver toxicity predictive
CC genes in the sample; and (c) using the test expression profile with a set
CC of reference expression profiles in a Predictive Model to determine
CC whether the agent will induce liver toxicity in the individual. Also
CC described: (1) predicting the liver toxicity of an agent using an in
CC vitro system; (2) predicting the liver toxicity in a biological sample
CC from an individual, in vitro cell cultures or explants to an agent via a
CC programmable machine; (3) a computer program product for enabling a
CC computer to perform Predictive Model analysis for liver toxicity on a
CC biological sample from an individual, in vitro cell cultures or explants
CC to an agent; (4) a computer system adopted to predict liver toxicity in a
CC biological system from an individual, in vitro cell cultures or explants
CC to an agent; (5) a computer program product for predicting liver toxicity
CC from a test sample expression profile; (6) mining genes predictive of
CC liver toxicity; (7) an integrated system for predicting liver toxicity;
CC and (8) identifying one or more liver inflammation predictive genes. The
CC method is useful for predicting the liver toxicity in an individual to an
CC agent. The present sequence represents a liver toxicity predictive gene
CC sequence that represents a 24 hour combo 3 gene, which is specifically
CC claimed in the exemplification of the present invention.

PT New composition comprises cDNAs useful for detecting altered expression
PT of genes in a toxic response of the spleen or for predicting toxic
PT responses to one or more agents including lymphoid tissue types or other
PT species.
XX
PS Claim 1; SEQ ID NO 224; 249pp; English.
XX
CC The invention relates to a novel composition comprising cDNAs for use in
CC detecting the altered expression of genes in a toxic response of the
CC spleen, where the cDNAs comprises 50-816 base pairs (ADR91045-ADR91348)
CC or their complete complements. The invention further comprises:
CC monitoring the treatment of compound toxicity in a sample; predicting the
CC spleen toxicity in an individual to an agent; predicting the spleen
CC toxicity of an agent using an in vitro system; a computer program product
CC for predicting spleen toxicity from an expression profile of nucleic
CC acids from a sample under test, comprising a computer readable medium
CC bearing an encrypted training data set, encrypted lists of genes selected
CC from the cDNAs, and a predictive model for causing a general purpose
CC computer to predict the spleen toxicity of the sample based upon the
CC training data set, the list of genes selected from the cDNAs, and the
CC expression profile of nucleic acids from the sample; and an integrated
CC system for predicting spleen toxicity, comprising means for measuring
CC gene expression profiles of spleen predictive genes from samples exposed
CC to the test agent and a computer system operably linked to the means that
CC is capable of implementing a predictive model. The composition comprising
CC cDNAs is useful for detecting altered expression of genes in a toxic
CC response of the spleen or for predicting toxic responses to one or more
CC agents including lymphoid tissue types or other species. The predictive
CC genes and models of the invention are useful for identifying and
CC evaluating various in vitro systems that can be used to accurately
CC predict in vivo toxicity. This polynucleotide sequence represents one of
CC the genes predictive for spleen necrosis of the invention.

PS Claim 7; Fig 4; 336pp; English.
XX
CC The present invention describes a method for predicting the liver
CC toxicity in an individual to an agent. The method comprises: (a)
CC obtaining a biological sample from the individual treated with the agent;
CC (b) measuring the expression of one or more liver toxicity predictive
CC genes in the sample; and (c) using the test expression profile with a set
CC of reference expression profiles in a Predictive Model to determine
CC whether the agent will induce liver toxicity in the individual. Also
CC described: (1) predicting the liver toxicity of an agent using an in
CC vitro system; (2) predicting the liver toxicity in a biological sample
CC from an individual, in vitro cell cultures or explants to an agent via a
CC programmable machine; (3) a computer program product for enabling a
CC computer to perform Predictive Model analysis for liver toxicity on a
CC biological sample from an individual, in vitro cell cultures or explants
CC to an agent; (4) a computer system adopted to predict liver toxicity in a
CC biological system from an individual, in vitro cell cultures or explants
CC to an agent; (5) a computer program product for predicting liver toxicity
CC from a test sample expression profile; (6) mining genes predictive of
CC liver toxicity; (7) an integrated system for predicting liver toxicity;
CC and (8) identifying one or more liver inflammation predictive genes. The
CC method is useful for predicting the liver toxicity in an individual to an
CC agent. The present sequence represents a liver toxicity predictive gene
CC sequence that represents a 24 hour combo 3 gene, which is specifically
CC claimed in the exemplification of the present invention.

PT Predicting kidney toxicity in an individual to an agent, useful for
PT predicting toxic responses to one or more agents comprising measuring the
PT expression of one or more kidney toxicity predictive genes.
XX
PS Claim 1; Page 330; 388pp; English.
XX
CC This invention relates to novel isolated kidney toxicity predictive genes
CC and methods of using such genes in the field of toxicology. Specifically,
CC it refers to novel genes that can be used for generating predictive
CC models, which in turn are useful for predicting the in vivo toxic
CC response to one or more agents. The present invention describes obtaining
CC a gene expression profile from a biological sample and using the
CC predictive model to determine whether an agent will induce kidney
CC toxicity in the individual. As such, it can be used to detect any toxic
CC effects that may be manifested as long lasting or chronic consequences
CC including irreversible toxicity or carcinogenesis. Furthermore, the
CC predictive genes can be considered as therapeutic targets for toxic
CC damage or to ameliorate specific disease conditions such as kidney tubule
CC necrosis or acute renal failure, as well as for additional screening
CC assays. This polynucleotide sequence is the partial gene sequence of a
CC rat kidney toxicity predictive gene of the invention.

            Clone distribution: MGC clone distribution information can be found
            through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov
            Series: IRAK Plate: 15 Row: m Column: 16
            This clone was selected for full length sequencing because it
            passed the following selection criteria: matched mRNA gi: 23510347.

COMMENT     On Nov 11, 2004 this sequence version replaced gi:54312159.
            -------------- Genome Center
                 Center: NIH Intramural Sequencing Center
                 Center code: NISC
                 Web site: http://www.nisc.nih.gov
                 Contact: nisc_zoo@nhgri.nih.gov
            -------------- Project Information
                 Center project name: ifi
                 Center clone name: 012D21

            The sequence data in this record represents an 'enhanced'
            version of a Phase 2 submission. Specifically, the indicated
            order and orientation of each sequence contig has been
            established using one or more of the following: read-pair
            data from individual subclones, overlaps with neighboring
            clones, alignment with available reference sequence (e.g.,
            human), and/or confirmation by PCR testing. In addition,
            the sequence assembly is based on at least 8X average
            coverage in Q20 bases and has been reviewed to rule out
            gross misassemblies, the low-quality ends of sequence
            contigs have been trimmed away, and each base is associated
            with a Phrap-derived quality score.
            -------------- Summary Statistics
                 Sequencing vector: plasmid; n/a; 100% of reads
                 Chemistry: Dye-terminator Big Dye; 100% of reads
                 Assembly program: Phrap; version 0.990319
                 Consensus quality: 149480 bases at least Q40
                 Consensus quality: 149754 bases at least Q30
                 Consensus quality: 149909 bases at least Q20
                 Insert size: 155000; agarose-fp
                 Insert size: 149944; sum-of-contigs
                 Quality coverage: 9.52x in Q20 bases; agarose-fp
                 Quality coverage: 9.84x in Q20 bases; sum-of-contigs
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 5 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *        1     36273: contig of 36273 bp in length
            *    36274     36373: gap of unknown length
            *    36374     55049: contig of 18676 bp in length
            *    55050     55149: gap of unknown length
            *    55150    101939: contig of 46790 bp in length
            *   101940    102039: gap of unknown length
            *   102040    114806: contig of 12767 bp in length
            *   114807    114906: gap of unknown length
            *   114907    150344: contig of 35438 bp in length.

COMMENT     This clone is available royalty-free through IMAGE Consortium
            Distributors. IMPORTANT: This sequence represents the full insert
            of this IMAGE cDNA clone. No attempt has been made to verify
            whether this corresponds to the full-length of the original mRNA
            from which it was derived.

COMMENT     Sanger Xenopus tropicalis EST/cDNA project.
            This sequence is from a Xenopus Gene Collection (XGC) library, from
            a library constructed by Aaron M. Zorn. cDNA was prepared from RNA
            extracted from gastrula embryos. EcoRI-NotI cut cDNA was then
            ligated into pCS107 with EcoRI at the 5' end and NotI at the 3'
            end.
            Vector: pCS107; Site_1: EcoRI; Site_2: NotI
            Host: Escherichia coli XL1-blue.

AL589699
LOCUS       AL589699              256608 bp    DNA     linear   ROD 17-DEC-2004
DEFINITION  Mouse DNA sequence from clone RP23-92G13 on chromosome 13 Contains
            the 3' end of the gene for a novel protein similar to KIAA0386,
            five novel genes, the Gmnn gene for geminin, gene PNAS-27, the
            Ttrap gene for Traf and Tnf receptor associated protein, the gene
            for a novel protein similar to KIAA0319, the gene for the ortholog
            of human and rat aldehyde dehydrogenase 5A1 (succinate-semialdehyde
            dehydrogenase) (ALDH5A1) (SSADH), the 5' end of the Gpld1 gene for
            glycosylphosphatidylinositol specific phospholipase D1 and four CpG
            islands, complete sequence.

COMMENT     On Apr 26, 2001 this sequence version replaced gi:13751568.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep --------------
            Genome Center
            Center: UK Medical Research Council
            Center code: UK-MRC
            Web site: http://mrcseq.har.mrc.ac.uk
            Contact: mouseq@har.mrc.ac.uk
            --------------
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.
            Sequence from the Mouse Genome Sequencing Consortium whole genome
            shotgun may have been used to confirm this sequence.  Sequence data
            from the whole genome shotgun alone has only been used where it has
            a phred quality of at least 30.
            RP23-92G13 is from the RPCI-23 Mouse BAC Library
            constructed by the group of Pieter de Jong.
            For further details see http://www.chori.org/bacpac/home.htm

  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 13, 2003 this sequence version replaced gi:23265926.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
```

```
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: GJVU
                Center clone name: CH230-42H3
            -------------- Summary Statistics
                Assembly program: Atlas 3.0;
                Consensus quality: 238380 bases at least Q40
                Consensus quality: 239660 bases at least Q30
                Consensus quality: 240760 bases at least Q20
                Estimated insert size: 255581; sum-of-contigs estimation
                Quality coverage: 7x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)
            * NOTE: This sequence may represent more than one clone.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 2 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1   242009: contig of 242009 bp in length
            *  242010   242109: gap of unknown length
            *  242110   245394: contig of 3285 bp in length.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk
            Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Dec 29, 1998 this sequence version replaced gi:4007165.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr6
            RP1-30M3 is from the library RPCI-1 constructed by the group of
            Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pCYPAC2
            -------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: vega@sanger.ac.uk
            -------------
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.

COMMENT     On Dec 24, 2004 this sequence version replaced gi:56542150.
            -------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: humquery@sanger.ac.uk
            --------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr6
            RP11-195J19 is from the library RPCI-11.1 constructed by the group
            of Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pBACe3.6.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-NOV-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Nov 13, 2002 this sequence version replaced gi:22773148.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

                Center clone name: CH230-9K13
            -------------- Summary Statistics
                Assembly program: Phrap; version 0.990329
                Consensus quality: 221551 bases at least Q40
                Consensus quality: 223436 bases at least Q30
                Consensus quality: 224655 bases at least Q20
                Estimated insert size: 229610; sum-of-contigs estimation
                Quality coverage: 8x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 1 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *       1   238494: contig of 238494 bp in length.

            --------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
```

```
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep Clone-derived
            Zebrafish pUC subclones occasionally display inconsistency over the
            length of mononucleotide A/T runs and conserved TA repeats. Where
            this is found the longest good quality representation will be
            submitted.
            Repeat names beginning 'Dr' were identified by the Recon repeat
            discovery system (Zhirong Bao and Sean Eddy, submitted), and those
            beginning 'drr' were identified by Rick Waterman (Stephen Johnson
            lab, WashU).  For further information see

  TITLE     Direct Submission
  JOURNAL   Submitted (01-JUL-2005) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Jun 28, 2005 this sequence version replaced gi:58531393.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: FDJG
                Center clone name: CH240-59M13
            -------------- Summary Statistics
                Assembly program: Atlas 3.0;
                Consensus quality: 224220 bases at least Q40
                Consensus quality: 226361 bases at least Q30
                Consensus quality: 227836 bases at least Q20
                Estimated insert size: 228962; sum-of-contigs estimation
                Quality coverage: 6x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 21 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

COMMENT     Please visit our web site (http://genome.gsc.riken.jp/) for further
            details.
            cDNA library was prepared and sequenced in Mouse Genome
            Encyclopedia Project of Genome Exploration Research Group in Riken
            Genomic Sciences Center and Genome Science Laboratory in RIKEN.
            Division of Experimental Animal Research in Riken contributed to
            prepare mouse tissues. First strand cDNA was primed with a primer
            [5' GAGAGAGAGAAGGATCCAAGAGCTCTTTTTTTTTTTTTTTVN 3'], cDNA was
            prepared by using trehalose thermo-activated reverse transcriptase
            and subsequently enriched for full-length by cap-trapper. Second
            strand cDNA was prepared with the primer adapter of sequence [5'
            GAGAGAGAGATTCTCGAGTTAATTAAATTAATCCCCCCCCCCCCC 3']. cDNA was cleaved
            with XhoI and SstI. Cloning sites, 5' end: XhoI; 3' end: SstI.
            Host: SOLR.

COMMENT     1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
            was normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.

COMMENT      1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
             end enriched, double-strand cDNA was digested with Not I and cloned
             into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
             was normalized. Library was constructed by Life Technologies, a
             division of Invitrogen.

COMMENT     1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
            was normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.

/note="Vector: pCMV-SPORT6 (Invitrogen); Site_1: SalI; Site_2: NotI; Mouse cDNA project by the Laboratory of Genetics, National Institute on Aging (NIA), Intramural Research Program, NIH (http://lgsun.grc.nia.nih.gov/cDNA). This is a long-transcript enriched cDNA library (Ref. Genome Res. 11: 1553-1558 (2001). [PMID: 11544199]). Total RNAs were extracted from a pool of 8 embryos at 10.5-days postcoitum. Double-stranded cDNAs were synthesized with an Oligo(dT) primer [Invitrogen: 5'-pGACTAGTTCTAGATCGCGAGCGGCCGCCCTTTTTTTTTTTTTTT-3'] from 2ug of total RNA, treated with T4 DNA polymerase, and purified by ethanol-precipitation. The cDNAs were ligated to Lone-linker LL-Sal4, purified by phenol/chloroform, and separated from free linkers by Centricon 100. Then, the cDNAs were amplified by long-range high fidelity PCR using Ex Taq polymerase (Takara) with a primer Sal4-S. The products were purified by phenol/chloroform and Centricon 100. The cDNAs were digested with SalI and NotI enzymes and cloned into SalI/NotI site of pCMV-SPORT6 plasmid vector. The DH10B E. coli host was transformed with the ligation mixture by the standard chemical method. The average insert size is about 3.4Kb. The library was constructed by Yulan Piao."

            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
            was not normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.
            This sequence belongs to sequence cluster 3474.r
            For more information about this cluster, see

            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
            was normalized. Library was constructed by Life Technologies, a
            division of Invitrogen. This sequence belongs to sequence cluster
            3474.r
            For more information about this cluster, see
            http://www.genoscope.cns.fr/cdna?s=CS0DI036DE01QP1&c=3474.r.

            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
            was normalized. Library was constructed by Life Technologies, a
            division of Invitrogen. This sequence belongs to sequence cluster
            3474.r
            For more information about this cluster, see
            http://www.genoscope.cns.fr/cdna?s=CS0DI042CF10QP1&c=3474.r.

                     /clone_lib="NIH_BMAP_M_S4"
                     /note="Vector: pT7T3D-Pac (Pharmacia) with a modified
                     polylinker; Site_1: Not I; Site_2: Eco RI; The
                     NIH_BMAP_M_S4 library is a subtracted library of a series,
                     ultimately derived from a mixture of individually tagged
                     normalized libraries from ten regions of the mouse brain
                     (cerebellum, brain stems, olfactory bulbs, hypothalamus,
                     cortex, amygdala, basal ganglia, pineal gland, striatum,
                     hipoccampus) after a series of subtractions to reduce the
                     representation of cDNAs from which ESTs had already been
                     generated. The following serially subtracted libraries
                     were generated in this process: NIH_BMAP_M_S4,
                     NIH_BMAP_M_S3.3, NIH_BMAP_M_S3.2, NIH_BMAP_M_S3.1,
                     NIH_BMAP_M_S2, NIH_BMAP_M_S1.  The subtracted library
                     (NIH_BMAP_M_S4) was constructed as follows:  PCRamplified
                     cDNA inserts from NIH_BMAP_M_S3.3, NIH_BMAP_M_S3.2, and
                     NIH_BMAP_M_S3.1 clones from which 3' ESTs had been derived
                     was used as  a driver in a hybridization with a pool of
                     the NIH_BMAP_M_S3.3, NIH_BMAP_M_S3.2, and NIH_BMAP_M_S3.1
                     libraries in the form of  single-stranded circles.  The
                     remaining single-stranded circles  (subtracted library)
                     was purified by hydroxyapatite column chromatography,
                     converted to double-stranded circles and electroporated
                     into DH10B  bacteria (LifeTechnologies) to generate the
                     NIH_BMAP_M_S4 library.  This procedure has been previously
                     described (Bonaldo, Lennon and Soares, Genome Research
                     6:791-806, 1996)"

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen. This sequence belongs to sequence cluster 3474.r
For more information about this cluster, see http://www.genoscope.cns.fr/cdna?s=CS0DK007AF03QP1&c=3474.r.

                     differentiated to an early endodermal cell type. Cell line
                     id and NIH Registry designation is BG01. Positive for
                     GATA4, MixL1, Msx1, HNF4alpha expression; negative for AFP
                     expression. Passage number 40. cDNA primed using oligo-dT
                     primer: 5'-pGACTAGTTCTAGATCGCGAGCGGCCGCCC(T)25-3' and
                     cloned into the EcoRV/NotI sites of pExpress-1. This
                     primary library is non-normalized (normalized primary
                     library is NIH_MGC_259). It was constructed by Express
                     Genomics (Frederick, MD). Sequence ends have been trimmed
                     to exclude vector and regions below Phred quality 16.
                     Three-prime sequences are presented as their reverse
                     complement and have been trimmed to exclude polyA. Note:
                     this is a Mammalian Gene Collection library."

RESULT 75
BI648868
LOCUS BI648868 691 bp mRNA linear EST 12-SEP-2001
DEFINITION 603275826F1 NCI_CGAP_Mam3 Mus musculus cDNA clone IMAGE:5316055 5', mRNA sequence.
ACCESSION BI648868
VERSION BI648868.1 GI:15563104
KEYWORDS EST.
SOURCE Mus musculus (house mouse)
ORGANISM Mus musculus
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Sciurognathi; Muroidea; Muridae; Murinae; Mus.
REFERENCE 1 (bases 1 to 691)
AUTHORS NIH-MGC http://mgc.nci.nih.gov/.
TITLE National Institutes of Health, Mammalian Gene Collection (MGC)
JOURNAL Unpublished (1999)
COMMENT Contact: Robert Strausberg, Ph.D.
Email: cgapbs-r@mail.nih.gov
Tissue Procurement: Lothar Hennighausen Ph.D., Chu-Xia Deng Ph.D.
cDNA Library Preparation: Life Technologies, Inc.
cDNA Library Arrayed by: The I.M.A.G.E. Consortium (LLNL)
DNA Sequencing by: Incyte Genomics, Inc.
Clone distribution: MGC clone distribution information can be found through the I.M.A.G.E. Consortium/LLNL at:

BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images include but are not limited to the items checked:

- ☐ BLACK BORDERS
- ☐ IMAGE CUT OFF AT TOP, BOTTOM OR SIDES
- ☐ FADED TEXT OR DRAWING
- ☑ BLURRED OR ILLEGIBLE TEXT OR DRAWING
- ☐ SKEWED/SLANTED IMAGES
- ☐ COLOR OR BLACK AND WHITE PHOTOGRAPHS
- ☐ GRAY SCALE DOCUMENTS
- ☐ LINES OR MARKS ON ORIGINAL DOCUMENT
- ☐ REFERENCE(S) OR EXHIBIT(S) SUBMITTED ARE POOR QUALITY
- ☐ OTHER: _____

IMAGES ARE BEST AVAILABLE COPY.
As rescanning these documents will not correct the image problems checked, please do not report these problems to the IFW Image Problem Mailbox.
